| 1. Title | Analysis of non-destructive test (NDT) – Ultrasonic Testing |
|---------------|---|
| 2. Code | EMCUMA311A |
| 3. Range | Use ultrasonic testing instruments, at servicing centres or locations with operating equipment, to detect, analyze and examine internal damages of metallic equipment. |
| 4. Level | 3 |
| 5. Credits | 3 |
| 6. Competency | Performance Requirements |
| | 6.1 Techniques and principles of principles of ultrasonic testing and examination for internal damages of metallic equipment ultrasonic testing for testing for testing damages of metallic equipment ultrasonic testing, testing to testing for testing damages of metallic equipment ultrasonic testing the specially with reference to those of liquid penetrant testing, magnetic particle testing and x-ray testing testing testing and x-ray testing testing testing testing testing testing and x-ray testing test |
| | Methods and procedures of analyzing and examination and analysis Use ultrasonic testing instruments effectively to analyze and examine internal damages or structure defects such as voids and pores on the metal equipment Use ultrasonic instruments to measure and calculate crack positions and size Mark the position with cracks effectively Base on the pros and cons of various types of NDTs to recommend on and conduct ultrasonic testing so as to confirm the positions and degree of work piece damages or structure defects Keep record of testing effectively |
| | 6.3 Professionalism ◆ Have adequate hands-on practice in ultrasonic testing for internal damages according to professional qualification requirements, and record and analyze damages damages on ◆ Inspect and analyze damages on metal equipment or structure defects safely according to guidelines on the use of materials and code of practice ◆ Uunderstand international standards or in-house guidelines, and report the positions and size of damages or structure defects identified according to requirements |

| 7. Assessment Criteria | The integrated outcome requirement of this unit of competency is: |
|------------------------|---|
| | (i) Capable to use ultrasonictesting effectively to detect, examine and analyze internal damages or structure defects of the metallic equipment; to measure and calculate crack positions and size and to record and mark properly; and |
| | (ii) Capable to point out the pros and cons of ultrasonic testing with reference to those of liquid penetrant testing, magnetic particle testing and x-ray testing |
| 8. Remarks | The credit value of this unit of competency is set on the presumption that the person already possesses the competency of EMCUMA202A "Non-destructive test (NDT) - ultrasonic testing". |
