1. Title	Install metallic (steel/stainless steel/galvanized iron) pipes and fittings
2. Code	EMCUIN217A
3. Range	Perform simple installation of metallic (steel/stainless steel/galvanized iron) pipes and fittings, and common parts at general industrial plants, power plants or premises/work sites where boat, fire fighting, water, gas or pipe works is involved.
4. Level	2
5. Credits	3
6. Competency	Performance Requirements
	 6.1 Types of pipes and fitting materials ★ Know about the types of pipes, accessories and materials, including: Types of pipes Types of flanges Bends and tees Expansion joints Joint accessories Fill materials Bedding and coating materials Heat preservation materials
	 Methods of installing and jointing pipes Capable to apply general repairing and bench fitting techniques, including marking, sawing, chiselling, drilling, scraping, grinding, jointing and sealing, in pipe installation according to requirements Capable to joint pipes by argon arc welding, electric arc welding, compressing, threading, flanging, etc. Capable to apply typical methods of cold or thermal bending in simple installation of pipes Place rubber gaskets or pads at proper positions for prevent leakage
	6.3 Professionalism in pipe overhaul and installation • Capable to use correct tools in simple installation of metallic (steel/stainless steel/galvanized iron) pipes according to requirements • Perform pipe installation according to legal requirements and the code of safety; pass the leakage test
7. Assessment Criteria	The integrated outcome requirement of this unit of competency is:
	(i) Capable to install common metallic (steel/stainless steel/galvanized iron) pipes and fittings correctly and safely according to pipe-laying and legal requirements and the code of safety; pass the leakage test.
8. Remarks	The credit value of this unit of competency is set on the presumption that the person already possesses basic knowledge of mechanics and installation skills.
