Chapter 1

Testing, Inspection and Certification Industry in Hong Kong

Section 1 Introduction

In his 2009-10 Policy Address¹, the Chief Executive cited the testing and certification industry as one of the six industry sectors that have economic potentials to excel in Hong Kong's future knowledge-based economy. A number of government initiatives were thus developed, which include (1) the establishment of the Hong Kong Council for Testing and Certification (HKCTC) in September 2009 to steer the industry development; and (2) the formation of the Testing, Inspection and Certification Industry Training Advisory Committee (TIC ITAC) in August 2010 to assist in facilitating the manpower development of the TIC industry under QF.

Background of Testing, Inspection and Certification Industry

Hong Kong as a gateway of China is usually referred as the interchange centre to certify the quality standards of products, such as food and toys from overseas and China for internal consumption and/or re-export. The Directives 2002/95/EC of the European Parliament on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS Directives), for example, are to reduce the waste management problems and to protect the human health from certain hazardous substances. Product items exporting to European Union would need to have certification on chemical testing performed on these items which shall be renewed annually. Meeting regulatory requirements from various countries became day-to-day activities of testing, inspection and certification businesses in Hong Kong.

Many reports and statistics suggested that there shall be a growing demand of manpower in the product testing industry in Hong Kong for the years ahead. These suggestions were based on the rapid increase of manufacturing plants in China and in the region, and on China's entry to the World Trade Organisation (WTO), which created an obligation and need for China to fulfil the product standard requirements of its trading partners.

In this situation, Hong Kong has a very important role to play. Overseas companies, as well as companies in China, look at Hong Kong test certificates as a guarantee of the quality of the products. In the Closer Economic Partnership Agreement (CEPA), it was highlighted that China and Hong Kong will urge their respective organisations to strengthen cooperation with a view to promoting conformity assessment (including testing, inspection and certification), accreditation and standardisation management.

With this background, the TIC industry was identified by the Task Force on Economic Challenges (TFEC), in June 2009, as one of six economic areas with high growth potential. Further data from the Hong Kong Special Administrative Region (HKSAR) Government indicated that from 2008 to 2009, the TIC industry's economic growth rate was about 13.1%². The statistics report also revealed that among the six economic areas (cultural and creative industries, medical services, education services, innovation and technology, testing and certification services, and environmental industries), testing and certification services exhibited the highest annual growth rate in terms of contribution to GDP from the year 2008 to 2009. It was considered a significant growth in a

² Hong Kong Monthly Digest of Statistics, Feature Article "The Situation of the Six Industries in Hong Kong in 2008 and 2009", Census and Statistics Department of HKSAR, February 2011.
(http://www.censtatd.gov.hk/hong_kong_statistics/four_key_industries/six_industries/index.jsp)

mature economy such as Hong Kong. The total number of persons engaged by private independent TIC establishments was 13,110 in 2011³, representing an increase of about 3.4% compared to 12,680 in 2009.

In order to steer the development of the TIC industry, the HKSAR Government established the Hong Kong Council for Testing and Certification (HKCTC) in September 2009. The vision of HKCTC is to develop Hong Kong into a testing and certification hub in the region by reinforcing the branding of “Tested in Hong Kong, Certified in Hong Kong.”

According to the report published by HKCTC in March 2010⁴, the TIC industry not only has direct economic contribution to Hong Kong, but it also supports the manufacturing, export and other service industries. The TIC industry plays an important role in daily life of the Hong Kong community, e.g. medical testing results for the diagnosis of illness in medical sector. Private laboratories have been playing an increasing role in supporting the food industry for safety and quality assurance and also the Government in food testing. The construction laboratories contribute to ensuring the safety of buildings and infrastructure facilities.

Owing to the immense scale and the diverse nature of the TIC industry, the work nature of the industry was grouped into three core business areas:

- Testing: the determination of one or more characteristics of an object according to a procedure.
- Inspection: the examination of a product design, product, process or installation and determination of its conformity to specific or general requirements on the basis of professional judgement.
- Certification: a third-party attestation related to products, processes, systems or persons.

The existing inspection services in Hong Kong tend to be focused on those areas that have regulatory requirements for inspection such as lift, fire services installation, vehicle, and building inspections. The area of inspection is more related to regulatory activities than commercial activities that contribute significantly to the economic growth. In addition to statutory inspection requirements, there are also voluntary inspection schemes, e.g. inspection of indoor air quality arising from the voluntary “Indoor Air Quality Certification Scheme for Offices and Public Places”.

In a way, the need for goods inspection also arises from the international trade. These activities however tended to be shifted to outside Hong Kong – with the relocation of the manufacturing industry from Hong Kong to the Pearl River Delta (PRD) Region, many goods inspection activities for export to overseas markets have been shifting to the Mainland and are increasingly conducted by Mainland employees.

Certification service could be broadly grouped into two areas: certification of a product or a management system. The TIC industry in Hong Kong provides certification service for different management systems that are recognised internationally and there is an increasing demand for new types of system certification. Product certification can also help enhance the quality of the products concerned and create new business opportunities for the TIC industry. There are new potential areas identified in the certification industry including environmental management system (ISO 14001 certificates), food safety management system (ISO 22000), social accountability system (SA 8000 or other similar code of conduct) and certification services relating to IT, carbon audit and greenhouse gas emissions. Food safety management system, climate change related audits and IT related audits are all in the upward trend.

³ Review Report of the Hong Kong Council for Testing and Certification 2013, March 2013.
([http://www.hkctc.gov.hk/en/doc/HKCTC_Report_Eng\(2013\)LR.pdf](http://www.hkctc.gov.hk/en/doc/HKCTC_Report_Eng(2013)LR.pdf))

⁴ Report of the Hong Kong Council for Testing and Certification, “Tested in Hong Kong, Certified in Hong Kong”, March 2010.

Testing service in general represents the biggest business volume of the TIC industry. The Review Report of HKCTC 2013 stated that a significant portion (representing 80% of the business receipts from testing and 50% of the total business receipts of private establishments in the industry in 2011) of the business receipts of private independent establishments was attributed to testing of textiles, clothing and footwear; toys and games; electrical products; and medical testing. Development of testing in these four trades is more mature and any new developments of testing in these areas may be required by some new initiatives, e.g. introduction of new regulations in local and/or international trade. In addition, the HKSAR Government will focus promotion efforts on the following six selected industries with potential demand for testing and certification services:

- Chinese medicine;
- construction materials;
- food;
- jewellery;
- environmental protection; and
- information and communications technologies.

In the following section, an analysis is carried out to examine the external environment in which the testing, inspection and certification industry is embedded in, while, implications drawn will be focused on the development of the competency standards required by the testing, inspection and certification industry.

Section 2

PEST Scan

A critical review of the macro environment is conducted so as to figure out the future challenges faced by the TIC industry sector. The present project will adopt a systematic approach advanced by **PEST**, in which **Political, Economic, Social and Technological** factors are evaluated in the process of environmental scanning. PEST analysis is particularly effective in analysing the macro-environment which the organisation is in. These macro-environmental factors usually are beyond an organisation's control while changes in the external environment also create new opportunities.

Political Factors: These include those factors on how and to what degree a government intervenes in the economy. Political factors may also include goods and services which the government wants to provide or be provided and those that the government does not want to be provided. Regulatory requirements in China and overseas countries and political stability fall into this category.

Economic Factors: Factors such as GDP, growth rates of various aspects in TIC industry, funding support from the government are examples of economic factors. These factors have major impacts on how businesses operate and make decisions.

Social Factors: This category refers to demographic variables, attitudes or lifestyle of the workforce and clients using the TIC services and the infrastructure supports to the industry. Trends in social factors affect the demand for TIC services and how the TIC establishments operate.

Technological Factors: Factors such as pace of technological changes, level of Research & Development activities etc. affect the cost, production levels, and competitive positioning of a TIC establishment.

As each of the above four factors covers a massive range of issues, the present analysis does not intend to carry out a comprehensive and inclusive evaluation; instead, only factors that have substantial impact on the TIC industry are selected and reviewed in the following paragraphs.

(A) Political Factors

As mentioned in Section 1, the testing and certification industry was identified as one of the six economic areas where Hong Kong enjoys clear advantages and has good potential for further development. The HKSAR Government is currently providing support to the TIC industry through various channels. One of these supports is to provide accreditation to offer official recognition to competent testing and calibration laboratories, inspection bodies and certification bodies which meet international standards by the Hong Kong Accreditation Service (HKAS) of the Innovation and Technology Commission, HKSAR Government. At present, there are three accreditation schemes currently operated by HKAS⁵:

- (i) Hong Kong Laboratory Accreditation Scheme (HOKLAS)
- (ii) Hong Kong Inspection Body Accreditation Scheme (HKIAS)
- (iii) Hong Kong Certification Body Accreditation Scheme (HKCAS)

Users of conformity assessment services will easily identify and select those accredited bodies (laboratories, inspection bodies, or certification bodies) in order to support their business.

As at end of 2012, there were 235 organisations accredited by HKAS, representing an increase of 16% when compared with 202 organisations as at end of 2009. The following table sets out the breakdown and changes in the number of accredited organisations (retrieved from the Review Report of the Hong Kong Council for Testing and Certification 2013³):

Category	Number of Accredited Organisations				
	2009	Terminations	New	2012	Change
Testing Laboratory	167	15	44	196	+17%
Inspection Body	20	3	3	20	-
Certification Body	15	0	4	19	+27%
Total	202	18	51	235	+16%

During the consultation with stakeholders of the TIC industry, some testing laboratories commented that their employees had already acquired more than three years relevant testing experience but they did not have the necessary academic qualifications to be authorised as approved signatories to endorse HOKLAS reports. An alternative route of recognised qualifications will be attractive to the practitioners working in the TIC industry.

HKAS is a member of the International Laboratory Accreditation Cooperation (ILAC) and the International Accreditation Forum (IAF) at international level; and the Asia Pacific Laboratory Accreditation Cooperation (APLAC) and the Pacific Accreditation Cooperation (PAC) at regional level. HKAS has been active in contributing to the international accreditation community. Through joining multilateral mutual recognition arrangements (MRAs) administered by ILAC, IAF, APLAC and PAC, the accreditation granted by HKAS to testing and certification organisations is recognised by about 84 MRA partners in 67 economies, including Hong Kong's major trading partners. This could enhance the recognition of conformity assessment results from local accredited organisations by these trading partners.

HKAS has introduced many new accreditation services to meet the changing needs of the industry and the community at large. These new accreditation services have addressed the needs of the industry, e.g. accreditation for laboratories to carry out testing for the CCC System to support Hong Kong's industry to explore the mainland market. On the certification side, in the past HKAS

⁵ Hong Kong Accreditation Service website (<http://www.itc.gov.hk/en/quality/hkas/about.htm>).

focused its accreditation service on a number of certification activities with high market demand, e.g. certification of quality management system to the ISO 9001 standard. To support local companies in providing a more diversified scope of certification services (in particular to support small and medium enterprises that cannot afford the high cost of seeking accreditation from overseas accreditation bodies), the types of certification services that can be accredited by HKAS have expanded from four to nine (+125%) since April 2010.

New regulatory requirements and initiatives from HKSAR Government bureaux and departments can generate new service demands and hence business opportunities for the TIC industry. In fact, the introduction of regulatory requirements is to achieve policy objectives, e.g. to ensure public safety; however, the TIC industry is ready to render services to concerned trades to facilitate their compliance with regulatory requirements. The following list illustrates some examples of these regulatory requirements and initiatives:

- Registration of proprietary Chinese medicines creates demand for testing of heavy metals and toxic elements, pesticide residues, microbial contaminants, etc.
- Product certification of building / construction materials in Housing Authority's capital works projects.
- Testing of food in compliance with local regulations (e.g. nutrition labelling scheme, new Food Safety Bill to strengthen legislative control on food safety).
- Government Laboratory has outsourced some of the regular food surveillance testing work to the private sector.

Apart from the above initiatives, the Report of HKCTC 2010-2011⁶ has stated that there will have good opportunities to promote the use of the testing and certification services in the selected trades as follows:

- Certification services for food safety management system to ISO 22000;
- Authentication of high-valued food by objective and scientifically-based tests, e.g. DNA sequences analysis, chemical finger-printing, etc.;
- Product certification services for new types of construction materials, e.g. fire rated doors and panel wall partitions, cement products, ceramic tiles, tile adhesive, repair mortar and aluminium window by phases to upgrade quality of buildings;
- Authentication of Chinese medicines by microscopic examination and physicochemical methods in accordance with the Hong Kong Chinese Materia Medica Standards (HKCMMS);
- Product certification scheme for Chinese medicines.

With the economic growth and development of populated urbanised centres, Mainland consumers have shown more and more interest in food quality and safety. Likewise food safety system in Mainland China has enormous impact to Hong Kong consumers that approximately 90% of fresh agricultural products are imported from Mainland China and this figure would be expected to further increase as the food trade activity between Hong Kong and Mainland China has been tightly integrated. Food safety testing and food safety management system are very important to safeguard the public health of Hong Kong against those poisoned food or defective food products. Consequently, the demand for TIC services in food testing and certification of food safety management system will increase.

At present, in support of Hong Kong's external trade, the TIC industry has been providing high volume of testing and inspection services for consumer products manufactured in Hong Kong and the Pearl River Delta (PRD) Region. Under the Supplement VII to the Mainland and Hong Kong

⁶ Report of the Hong Kong Council for Testing and Certification 2010-2011, August 2011.
(http://www.hkctc.gov.hk/en/related_document.html)

Closer Economic Partnership Arrangement (CEPA) signed in May 2010 and details announced in January 2011, testing laboratories in Hong Kong are allowed to co-operate with designated Mainland organisations in testing products for the China Compulsory Certification (CCC) System for four selected products processed in Hong Kong. These testing laboratories have to be accredited by the HKAS in order to undertake tests for the relevant products under the CCC System. Through the Supplement VIII to CEPA signed in December 2011, the pilot was extended to cover all 22 types of products under CCC System. The Supplement IX to CEPA, signed in 2012, has further expanded on a pilot basis in Guangdong Province the scope of certification services that can be undertaken by Hong Kong testing laboratories to cover food. These new measures under CEPA will provide testing laboratories in Hong Kong with more opportunities to provide testing services in Mainland China and hence promote the trade between the two places.

Another important political factor affecting the TIC industry is the attitude and policy of Mainland China government, as well as the economic situations of Mainland China. Over the years, the TIC industry in Hong Kong succeeded to earn high integrity and ethical reputation in the business world. With ever tightening testing, inspection and certification requirements in transnational trading and Mainland China to continue its world factory role in the next decade, opportunities exist for the TIC industry in Hong Kong to contribute and benefit.

In spite of the above factors and opportunities, the local TIC industry still faces many challenges, especially the competition from Mainland China for further development. The Mainland testing laboratories have lower labour and land costs and are geographically close to their clients. Consequently, the Mainland testing and certification service providers enjoy the competitive edge with lower labour and capital costs and shorter travelling time.

From the global perspective, new or more stringent rules and regulations are imposed by the major importing countries on consumer product quality, safety and efficiency. Besides, some incidents occurred worldwide would have impact on the demand of local TIC services. Some examples are listed as follows:

- New EU Directive 2009/48/EC on toy safety (EN71-1:2011, EN71-2:2011, EN71-3:2013, EN71-4:2013, EN71-5:2013, EN71-8:2011, EN71-12:2013, EN62115-A2:2011);
- EU Regulation No. 248/2011 on food container materials;
- Testing and certification under US Energy Star Program;
- Photobiological safety testing for LED lighting products (EN62471);
- RoHS Recast Directive 2011/65/EU on restricting the use of several hazardous heavy metals, brominated flame retardant, phthalates in electrical and electronic equipment, including medical devices and monitoring and control instruments;
- The candidate list of potential Substances of Very High Concern (SVHC) under REACH Regulation has been updated to include a total of 144 substances in June 2013;
- Phthalate testing service after the outbreak of phthalate contamination in sports drinks and beverages in Taiwan;
- Certification of occupational health and safety management system to OHSAS 18001 standard;

- Certification of information security management system to ISO/IEC 27001 standard.

These new or more stringent international regulations and incidents would definitely drive for substantial demand for TIC services from clients who need to comply with these regulatory requirements or to ensure the safety of the consumer products.

(B) Economic Factors

The TIC industry supports the manufacturing, export and other service industries, and is therefore an integral part of the overall supply chain. For instance, consumer product testing and inspection services are mainly for exported goods while construction materials testing and certification, food testing, environmental testing, testing and authentication of Chinese medicines mainly focus on local industries. Demand of system and product certification businesses are generated both locally and externally (e.g. in the Mainland). With the industry's extensive involvement in supporting Hong Kong's external trade, the TIC industry could be affected by the macro economic climate of major economies outside Hong Kong. Indeed, the industry has overcome a lot of challenges in the past few years to maintain a steady growth in business against the background of continuous uncertainties in the US and European markets.

The TIC industrial has revealed a substantial growth trend in recent years according to the following tabulated figures⁷.

(i) TIC industry profile:

	2009	2010	2011
Independent testing laboratories, inspection and certification bodies	570	610	600
Employment	12,610	12,390	13,100
Business receipts (HK\$)	8.6 billion	8.9 billion	10.8 billion
Value-added / contribution to GDP (HK\$)	5.1 billion	5.2 billion	5.4 billion

(ii) Breakdown of business receipts by types of services:

	2009 (HK\$ Million)	2010 (HK\$ Million)	2011 (HK\$ Million)
Testing	5,972 (69%)	6,052 (68%)	6,729 (62%)
Inspection	1,316 (15%)	1,691 (19%)	1,656 (15%)
Certification	517 (6%)	356 (4%)	395 (4%)
Others	818 (9%)	801 (9%)	2,000 (19%)
Total:	8,622 (100%)	8,900 (100%)	10,780 (100%)

(iii) Proportions of business receipts from provision of testing services:

	2009	2010	2011
Textiles, clothing and footwear	24%	26%	21%
Toys and games	24%	26%	24%
Medical testing	20%	22%	21%
Electrical products and telecommunications equipment	14%	9%	13%
Others (construction materials, food, Chinese medicines, indoor air quality)	18%	17%	20%

In 2011, the majority (62%) of business receipts were from testing activities. It is anticipated that

⁷ The figures are extracted from the following sources:

- Report of the Hong Kong Council for Testing and Certification 2011-2012, August 2011
 - Review Report of the Hong Kong Council for Testing and Certification 2013, March 2013
 - PowerPoint file "Industry Profile of Testing and Certification Services in Hong Kong", Census and Statistics Department, June 2013
- (http://www.hkctc.gov.hk/en/doc/Testing_Certification_IndustryProfile2011_CSD_Statistics_LR_e.pdf)

the testing sector will still have the substantial economic growth in coming years due to new regulatory requirements and initiatives from the local government and overseas countries. Such an economic growth in the testing sector will in turn increase the manpower demand to support the business growth in the TIC industry. From the breakdown of business receipts of testing services, the testing of textiles and toys still contribute to about half of the business receipts from testing services, i.e. the major revenue of TIC industry. It was foreseeable that there would be an increasing trend for companies to set up their own laboratory testing divisions in response to such needs, in order to curtail the corresponding operation expenses, as well as boost the efficiency on product testing.

On the other hand, there is a substantial increase in the business receipts from the “Others” item which includes food testing, construction materials testing, and testing of Chinese medicines, etc. This is evidenced by the regulatory requirements on food safety and nutrition labelling, outsourcing of food testing by Government Laboratory, product certification of construction materials, and registration of proprietary Chinese medicines. There will have great potentials for further development in the food testing, construction materials testing and testing of Chinese medicines in the TIC industry.

The set-up cost for certification and inspection bodies is similar to other commercial companies. Testing laboratories have, however, a relatively high set-up cost due to equipment cost and accommodation, etc. As for financing from banks, there is no particular difficulty as compared to other business. SMEs are coping with the set-up costs through various means such as specialisation and outsourcing. Owing to the small size of Hong Kong’s economy, commercial services providers in the TIC industry may be hesitant to invest on certain services that do not have sufficiently large demand and hence revenue. As a result, the variety of services provided by the TIC industry may not be comprehensive enough, i.e. some potential business opportunities cannot be captured.

In view of the capital investment, the HKSAR Government will promote the Small Entrepreneur Research Assistance Programme (SERAP⁸) to those SMEs and encourage them to make use of the funding scheme. From April 2010 till December 2012, five R&D projects relating to testing and certification were supported by SERAP with approved funding of \$9.4 million. An example is the development of transgenic fish for biological testing to monitor heavy metals, toxins and persistent organic pollutants. Moreover, the Hong Kong Productivity Council (HKPC) and the Hong Kong Science and Technology Parks Corporation (Science Park) have laboratory facilities and equipment that are available for shared use by private testing laboratories. In 2011, HKPC set up a new electromagnetic compatibility anechoic chamber with Government funding of \$9.9 million. The new chamber enables local laboratories to test products according to the latest electromagnetic compatibility requirements in the European market. There are also other forms of Government funding support that may help developing the TIC industry. Some examples include the SME Development Fund for a local trade association to develop a professional certification scheme for testing personnel which has been launched in September 2011, the Commercial Information Circulars, and the Innovation and Technology Fund (ITF) to enhance technical capability of the industry.

Testing laboratories are generally located in industrial buildings, except for medical testing laboratories which are usually located in commercial buildings. Inspection and certification bodies are generally accommodated in rented premises of commercial buildings. As at end of 2011, the average vacancy rate of industrial and commercial buildings was 6.7%, equivalent to a total vacant area of about 2.64 million m². In view of the size of vacant building stock as

⁸ SERAP is a technology entrepreneurship programme under Innovation and Technology Fund (ITF) which provides pre-venture capital stage financing to support technology entrepreneurs and small enterprises to carry out research and development work for starting new business and conducting market validation.

compared to only some 600 private establishments in the industry, the supply of premises should generally cope with the demand. The Government is conducting the planning and engineering studies of several new developments, including the Lok Ma Chau Loop and the Northeast New Territories New Development Areas. The TIC industry is interested in additional supply of land in the new development areas with testing and certification as one of the permitted land uses. However, good infrastructure, including convenient transportation network, should be provided.

(C) Social Factors

Hong Kong has been a business and commercial community for a long time in the region. The major strengths enjoyed by Hong Kong are summarised as follows:

- (i) The high level of professional integrity and credibility of the Hong Kong society as a whole give confidence to the users of the local TIC industry. The Independent Commission Against Corruption has developed a “Corruption Prevention Guide for Testing and Certification Industry” which provides a host of good practices to enhance integrity management and internal control. Moreover, good intellectual property protection helps attract business because companies prefer to conduct tests of prototypes of new products in Hong Kong to avoid replicas of new products in the market. Training on ethical management may be useful for practitioners in the TIC industry to upkeep their working standard.
- (ii) Good telecommunications infrastructure would enhance fast communication of testing / inspection results to overseas buyers of products. The language capability of Hong Kong people in English, Chinese and Putonghua would enable the local TIC industry to communicate easily with manufacturers in Mainland China and overseas buyers. The above infrastructure can promote the TIC services providers to the users and hence support the business development of the industry.
- (iii) The sound legal system, low tax rate and simple tax system, good law and order, and good language skills would enable the attraction of foreign conformity assessment bodies to set up branches in Hong Kong. This would bring international experience in TIC services to Hong Kong and strengthen the business opportunities of local TIC industry.
- (iv) Good corporate governance and efficient operation in TIC establishments accredited by HKAS would allow fast turnover and provision of flexible services. Consequently, the quality services of TIC industry can build up good relationship with clients and hence to achieve the sustainability of the business operations.
- (v) Hong Kong has a well established education and training system to provide the necessary manpower in professionals and associate professionals required to support the development of the TIC industry. At present, the local universities offer various undergraduate and postgraduate programmes in science, applied science, engineering, and fashion and textiles disciplines⁹. The Vocational Training Council (VTC) also offers Higher Diploma programmes and part-time in-service training programmes in applied science and engineering disciplines¹⁰ that are relevant to the TIC industry.

In spite of the above strengths, the major challenge faced by the TIC industry is to compete with other industries for talent. The mobility of staff who has worked for less than three years in the TIC industry is much higher than those who have worked longer. The total number of vacancies was about 320 for the TIC industry in 2009. The TIC industry is not attractive to graduates due to the heavy workload, less pleasant working environment, and unfamiliar business nature and prospects. The TIC industry also has difficulties to retain top talent in view of the comparatively small size of the industry. In addition, there is a need to tackle short-term demand surges in response to changes in overseas regulatory requirements for products manufactured in the PRD Region and tested in Hong Kong for export markets. The TIC industry commented that the training could be enhanced to better suit the needs of the industry and also to increase students’ awareness and understanding of the industry to attract talents. Moreover, more enhancement

⁹ For details of the undergraduate and postgraduate programmes offered by local universities, please refer to the website of Hong Kong Council for Testing and Certification (<http://www.hkctc.gov.hk/en/work.html>).

¹⁰ For details of the Higher Diploma and in-service training programmes offered by VTC, please refer to VTC Testing and Certification Portal website (<http://t-cert.vtc.edu.hk/>).

training should be developed for practitioners in order to enhance their skills and professionalism.

(D) Technological Factors

In local TIC industry, there is a high technology requirement, especially for laboratory settings of the testing sector. At present, high proportion of professionals and associate professionals are engaged in TIC industry and most of them are from science and engineering disciplines. Hong Kong has the technological competence to perform most commonly demanded tests by clients. Moreover, international testing laboratories in Hong Kong have the advantage of being relied on their global network for technology transfer support.

However, for further development and growth of the TIC industry, the following research and development (R&D) activities in technology aspects should be necessary:

- Adaptation of new testing technologies developed overseas to the local industry;
- Interpretation of international standards;
- Development of new testing methods locally;
- Continuous improvement to existing testing methods to enhance efficiency and accuracy;
- Automation of routine testing processes.

As most of TIC establishments are operated on commercial basis and some testing laboratories requiring technological input in conducting day-to-day operation are relatively small in size, they may not afford to spend much in R&D activities for new testing methodology if there is no sufficiently large market demand. The following measures may be required to help elevate standards and enhance the overall development of the industry:

- Funding support on various R&D activities such as ITF, SERAP, and R&D Cash Rebate Scheme;
- Assistance to the ITC industry to link to technological institutions in Hong Kong for collaboration opportunities, e.g. development of new testing methodologies, setting up of testing sites, sharing of advanced equipment;
- Keep the industry abreast of the latest development in international standards;
- Technical support from Government Laboratory to share new testing methodologies and skills with the industry, organise proficiency testing, and produce reference materials that are in demand by the local testing industry.

It is anticipated that the establishments of the TIC industry would make use of the above measures to further develop their business opportunities, especially in new service areas.

Section 3

Consultation with Stakeholders of the TIC Industry

As mentioned earlier the work nature of the testing and certification industry can be largely grouped into testing, inspection and certification. In order to further analyse the activities of the TIC industry so as to identify its core functional areas, consultation with different stakeholders of the industry was carried out to collect their views on identification of key functional areas and the skills set or competency required of the practitioners working in the TIC industry. The findings of the consultation / interviews are summarised as follows.

- (i) Most of the practitioners in consumer products testing and environmental testing have acquired the necessary academic qualifications (e.g. Bachelor degrees, higher diplomas, diplomas, etc.) before employment. However, some interviewees commented that there were skills gaps between the academic qualifications and the job competency requirements. Below are some examples of skills gaps identified and the job competency required:
- Interpretation of technical standards / regulatory requirements on product testing;
 - Test method development for new / revised standards and/or regulatory requirements in overseas countries;
 - Field sampling techniques;
 - Laboratory testing techniques;
 - Technical skills in instrumental analysis;
 - Microbiological techniques;
 - Testing of construction materials;
 - Work flow of a testing laboratory;
 - Specific techniques of product testing (e.g. safety tests, electromagnetic compatibility tests) and extension of these techniques from one kind of product to another kind of product;
 - Use, calibration and maintenance of testing equipment;
 - Result verification and reporting;
 - Quality system and requirement;
 - Research and development for new initiatives / new testing methodologies;
 - Code of conduct: professional ethics, integrity, etc.
- (ii) Most of the practitioners in construction materials testing are mainly trained from the apprenticeship system and may not have the minimum academic qualifications required for meeting the tender specifications of construction material testing and certification from the Public Works Central Laboratory of the Civil Engineering and Development Department, HKSAR Government (at least a pass in HKCEE English Language plus two years of relevant working experience) and the Housing Authority (five passes in HKCEE subjects plus one year relevant experience). There is a need of a mechanism or platform for recognising the vocational qualifications and experiences of the practitioners working in construction materials testing in order to supplement the inadequacy of their academic qualifications.
- (iii) The Hong Kong Association for Testing, Inspection and Certification Limited (HKTIC) has launched the Professional Certification Scheme (the Scheme) for Testing Personnel to provide certification of individuals who can demonstrate their knowledge and competencies in their field of testing¹¹. The Scheme has therefore defined the major skills set and competencies required by testing practitioners for certification purpose.
- (iv) Inspection of consumer products is still the dominant business in the inspection sector. However, the demand for inspection of welds, construction products and building materials is increasing in recent years. The competency standards required by the personnel for

¹¹ Professional Certification Scheme for Testing Personnel launched by HKTIC: <http://www.hktic.org/>

conducting inspection of consumer products and building materials can be identified and developed.

- (v) Most of the practitioners working in the certification sector have already acquired the necessary academic qualifications and working experience in related business fields. Moreover, there have already well established competency specifications for auditors in the certification of most management systems. The certification sector would require the competences in the business sense for capturing new niche areas of further business development and in the technical sense for developing new certification schemes for products in local industries.
- (vi) At present, continuing professional development (CPD) training is not mandatory in the TIC industry. However, the users of services providers of the TIC industry may require the accredited testing laboratories, inspection bodies or certification bodies to have their staff's CPD training records in order to ensure the reliability of the test / inspection reports or certification services. This would lead to a demand for the development of quality and recognised training programmes in order to enhance the professional development of practitioners in the TIC industry.

Based on the PEST analysis of the TIC industry in Section 2 and the comments from the industrial stakeholders, the following areas in the TIC industry are identified to have substantial demand for the development of competency standards:

- (i) Testing of consumer products such as textiles and garments, toys, food, electrical products;
- (ii) Testing of construction materials;
- (iii) Environmental testing;
- (iv) Product inspection, especially for building materials;
- (v) Management system and product certification.

Section 4 The Way Forward for TIC Industry

Hong Kong has its own uniqueness such as being a free trade port and a trading hub where there are a lot of buying offices, its proximity to the Mainland and use of both Chinese and English.

It is now timely for the TIC industry to develop its work-based competency standards to guide effective manpower preparation in anticipation of the business demand; and to nurture the trade into a specialised profession.

While the setting of work-based competency standards and the provision of skills upgrading opportunities will prove helpful to future TIC manpower development, the immediate problem identified is the lack of attraction of the industry for youngsters to join. This may partly be due to the unfamiliar business nature of the industry and partly to the lack of professional and social identity. The industry also finds a very high wastage of new recruits in their first two years of engagement, which may be accorded to the repetitive work nature and the short ranged career opportunities perceived from the initial encounter. A pragmatic solution must therefore be required to address these issues as priority.

Chapter 2

Qualifications Framework

Section 1 The Need for Qualifications Framework

In Hong Kong, there is a lack of formal professional status for people working in the TIC industry. During the interview with various stakeholders, there is a skill gap between the academic qualifications (e.g. Bachelor degree, higher diploma) and job competencies required by the TIC industry. There is a need to have a common platform – Qualifications Framework (QF) – to recognise the vocational qualifications for professional development of practitioners in the industry. The QF aims to clearly define the standards of different qualifications acquired from academic, vocational and continuing education, ensure their quality and indicate the articulation ladders between different levels of qualifications. By encouraging and promoting lifelong learning to the workforce, QF will enable individuals to pursue their career goals with the ultimate mission of cultivating a pool of high standard and competitive employees.

Establishments of the TIC industry indicated that they are currently facing difficulties in attracting quality manpower to support the growth of the industry – further business growth would be hampered with this problem. The obstacle of lack of attractiveness is largely related to the structural problems on: (i) the lack of a career ladder, and (ii) the lack of an academic ladder for the TIC industry. Without these two ladders, the TIC industry cannot compete with other industries for quality talent from the workforce.

For the academic ladder, the Open University of Hong Kong (OUHK) launched a distance-learning Bachelor of Science in Product Design, Testing and Certification programme in April 2010 and a part-time Master of Science in Testing and Certification programme in April 2012. The OUHK is planning to launch a full-time Bachelor of Science (Hons) in Testing and Certification programme in 2013. The Hong Kong Baptist University also launched a Bachelor of Science (Hons) in Analytical and Testing Services programme in September 2012. Other educational institutions have also been offering various full-time and part-time testing and certification related training courses. For example, many of the higher diploma programmes from the Vocational Training Council, which are pegged at QF level 4, are related to the TIC industry. In April 2010, VTC offered 11 higher diploma programmes with testing and certification elements in applied science and engineering disciplines. Following the 3+3+4 Education Reform, these programmes were revamped into ten new ones in September 2012. The QF can be used to facilitate the articulation between qualifications of different levels.

For the career ladder, the TIC industry would need an objective framework to quantify the competence levels of the workforce and this framework would then be used as a reference point for career promotion and advancement. A major development in this area is the formation of the TIC ITAC to assist in facilitating the manpower development within the QF in such a way that the QF can be used to develop the career pathways for practitioners in the industry.

The TIC ITAC comprises key industry stakeholders in a steering role to work on job competency standards for core functions. A set of specification of competency standards (SCS) will be developed for the TIC industry. SCS comprises a whole set of core competencies which describe skills, knowledge and attributes that are required by the industry at various levels under different functional areas. SCS can be further customised to serve as an objective basis for education, training, qualification recognition, human resources management, etc. in individual organisations. Nevertheless, the QF is a platform where different stakeholders can find useful information related to the qualifications or competency requirements of the sector. To cater for different purposes, readers can tailor the information according to their own needs.

Chapter 3

Specification of Competency Standards

Section 1 Applications of the Specification of Competency Standards

In general, the specification of competency standards (SCS) can be applied in the following ways:

- Education and training: SCS provides the learning outcomes (required competencies at various QF levels) and assessment criteria for training institutions to design the curriculum of suitable training programmes and also provides a basis for credit accumulation and transfer among different training institutions.
- Human resources management and development: for employers to design their in-house or internal training to individual employees or to use the SCS as yardsticks for identifying personnel with suitable skills and knowledge for recruitment or promotional purposes.
- Qualifications and assessment: SCS provides assessment base for the recognition of prior learning (RPL) of employees.
- SCS can facilitate lifelong learning of students and working adults.
- The development of QF system for the TIC industry can sustain competitiveness and enhance employability of Hong Kong people.

Once the TIC industry functional map is established, it shall form the basic framework for developing the specification of competency standard (SCS). This SCS, when ready, could serve as outcome benchmark for: (i) vocational education and training, (ii) competency assessment and professional recognition, and (iii) various human resources functions.

The establishment of the SCS under QF system can meet specific needs in the TIC industry which includes:

- Professional certification purpose (e.g. HKTIC Professional Certification Scheme for Testing Personnel)
- Education and training purpose (e.g. benchmarking with OUHK/VTC programme objectives and intended learning outcomes)
- Occupational purpose (e.g. in-service training for enterprise)

The SCS may also make explicit key employment attributes and outcome standards on:

- Occupational qualities (e.g. practice and competency)
- Vocational qualities (e.g. knowledge and skill cognition, work aptitude and attitude)
- Professional qualities (e.g. integrity, conduct and ethics)

TIC SCS may be regarded as a set of core competencies for the identified work functions with specifications on integrated outcome performance for the industry. These competency standards are the industry requirements for the skills, knowledge and attributes required to satisfactorily perform a job at a certain level. The consensual standard on competencies applicable to various skill functions can be presented as Unit of Competencies (UoCs) in the SCS. The UoCs are competency-based, contextual and outcome criteria referencing. Each UoC represents an inseparable, self-contained set of competencies required to perform a specific task. The UoCs can be grouped into building blocks for serving different purposes.

The drafting of TIC SCS would make reference to similar international competency standards. For instance, in Mainland China, the national occupational skill standards have been established for chemical examiner, food examiner, construction material chemical analyst, and Chinese medicine examiner for the occupational skill testing under the National Vocational Qualification (NVQ). The TIC SCS may be benchmarked with the competency requirements of the national occupational skill standards to further promote the TIC industry in the Mainland. Besides, the Australian Qualifications Framework (AQF) has established a set of competency standards for laboratory operations training package including chemical tests and instrumental techniques, physical tests, construction materials tests, microbiological tests, food tests, etc. The New Zealand Qualifications Authority (NZQA) has also established competency standards in Laboratory Practice & Technology and Engineering & Technology under the New Zealand Qualifications Framework (NZQF). In United Kingdom, the National Qualifications Framework (NQF) has relevant units of competency in laboratory science as well as building and construction. The benchmarking of HKQF with NVQ, AQF, NZQF and NQF will be explored in the future.

Section 2

Major Functional Areas of TIC Industry

The Testing, Inspection and Certification Industry Training Advisory Committee recommend the major functional areas of the TIC SCS as follows:

(I) Laboratory / On-site Testing

(i) Testing Operations

Testing Operations functional area incorporates a complete workflow of a testing laboratory to provide quality-assured test results and reports on samples according to the request of customers. The major functions in this functional area include Testing Method Development and Operation Planning; Sampling and Sample Handling; Testing (including Chemical, Biological/Microbiological, Environmental, Electrical and Electronic, Physical and Mechanical); Data Collection, Analysis and Interpretation; Quality Assurance of Test Results; Measurement Traceability; Equipment Maintenance; and Test Result Reporting.

(ii) Testing Quality Management

Quality management is an important aspect in a testing laboratory to ensure the quality of outputs of its testing work by maintaining its quality system in compliance with the requirements of relevant international standards and/or accreditation criteria. The major functions in this functional area include Laboratory Quality System Development, Implementation, Monitoring and Maintenance.

(II) Inspection

(i) Inspection Operations

Inspection Operations functional area describes a complete workflow of an inspection body to provide quality-assured inspection results and reports according to the request of customers. The major functions in this functional area include Inspection Method Development and Preparation; Conducting Inspection; Quality Assurance of Inspection Results; and Inspection Result Reporting.

(ii) Inspection Quality Management

Quality management is an important aspect in an inspection body to ensure the quality of outputs of its inspection work by maintaining its quality system in compliance with the requirements of relevant international standards and/or accreditation criteria. The major functions in this functional area include Inspection Quality System Development, Implementation, Monitoring and Maintenance.

(III) Certification

(i) Certification Operations

Certification Operations functional area describes a complete workflow of a certification body to provide quality-assured audit reports and certificates according to the request of customers. The major functions in this functional area include Certification Audit Planning; Conducting Audit; Quality Assurance of Auditing; and Audit Reporting.

(ii) Certification Quality Management

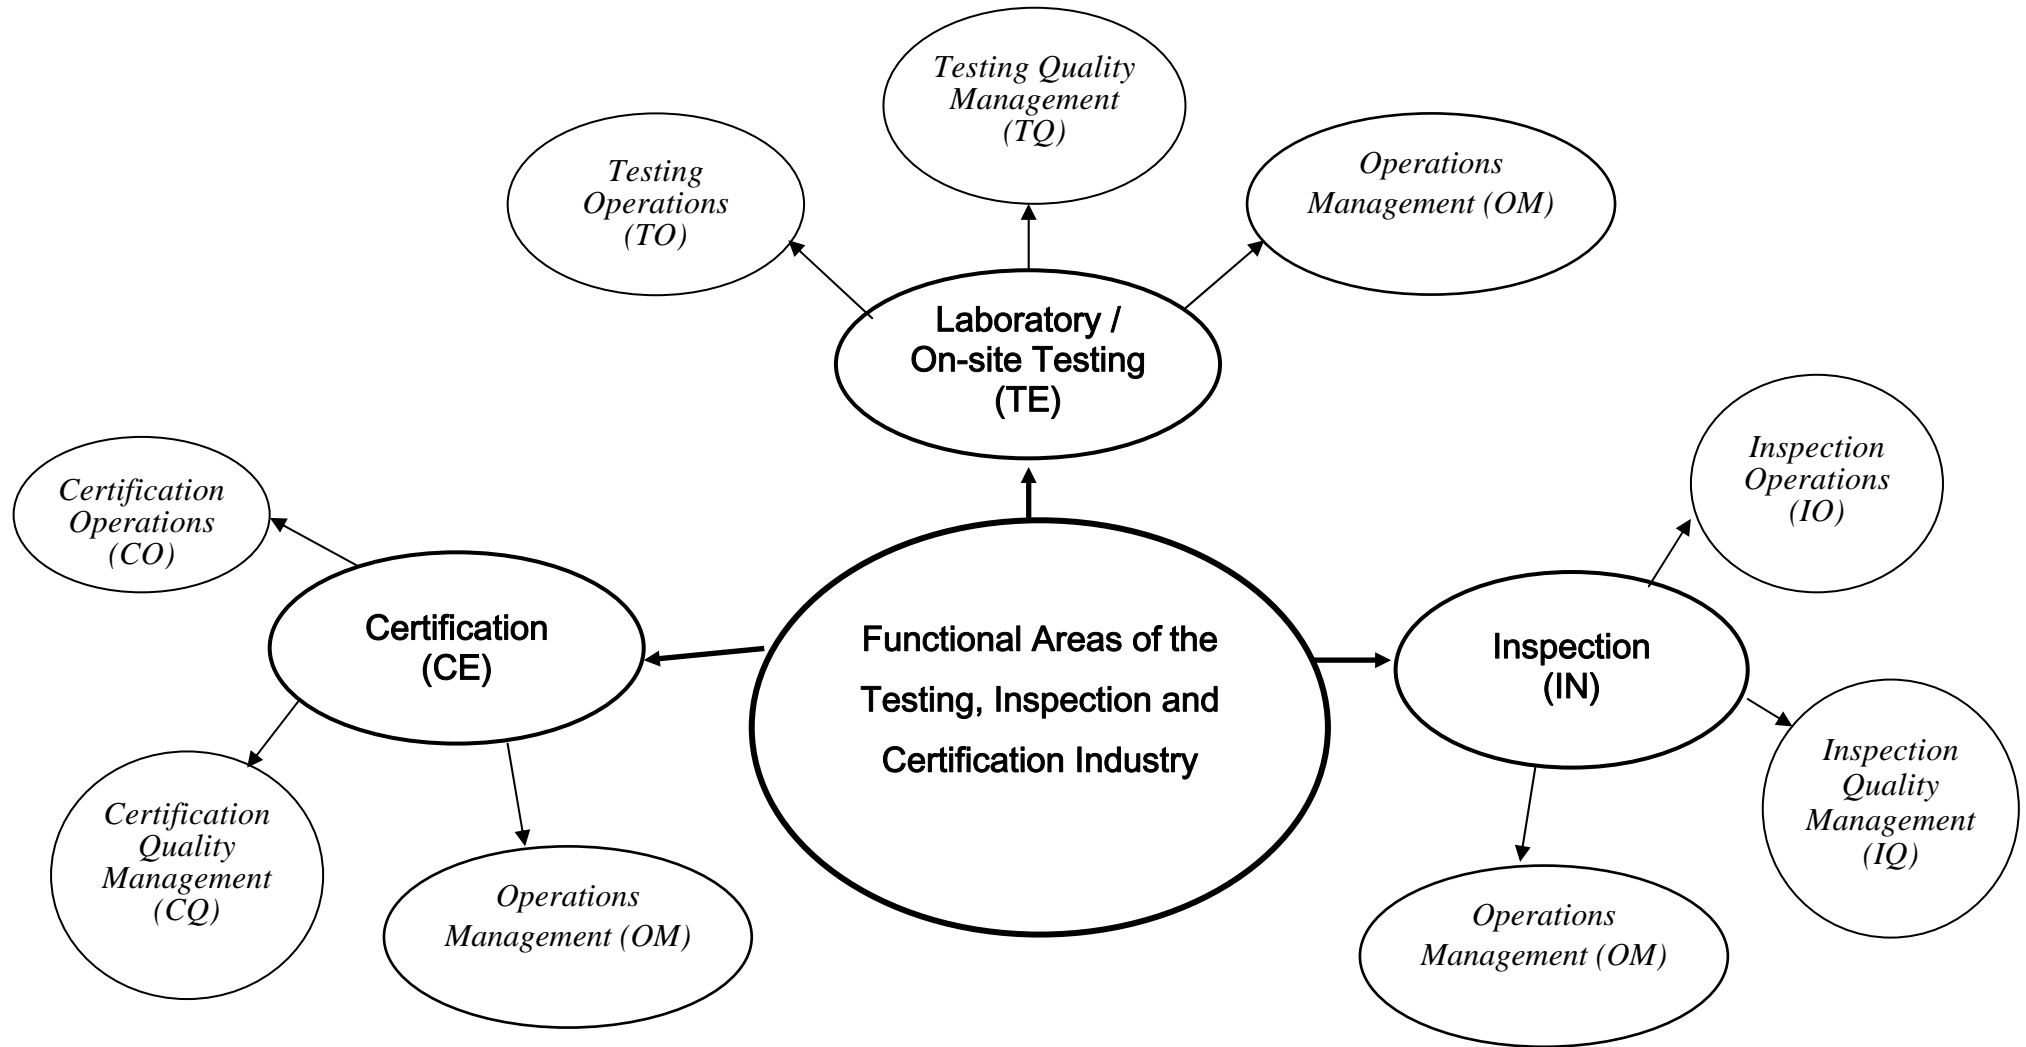

Quality management is an important aspect in a certification body to ensure the quality of outputs of its auditing work for certifying a management system or a product by maintaining its quality system in compliance with the requirements of relevant international standards and/or accreditation criteria. The major functions in this functional area include Certification Quality System Development, Implementation, Monitoring and Maintenance.

(IV) Operations Management

Operations Management covers the provision of operational and management support for TIC activities. The major functions in this functional area include Ethical Management; Environmental Protection; Occupational Safety and Health; Risk Management; Human Resources Management; and Customer Service.

Chapter 4 Units of Competency

Functional Map Showing the Functional Areas of the Testing, Inspection and Certification Industry

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Test Method Development and Operation Planning				Validate test methods (2 Credits) 105761L4 (P4.3 - 2)	Adopt test methods and procedures from standard methods (2 Credits) 105755L5 (P4.3 - 5)	Establish and evaluate laboratory operations in functional area (2 Credits) 105753L6 (P4.3 - 17)	
				Verify test methods (2 Credits) 105762L4 (P4.3 - 3)	Develop non-standard test methods (2 Credits) 105756L5 (P4.3 - 6)	Formulate work schedule for laboratory / on-site testing (2 Credits) 105754L6 (P4.3 - 18)	
				Estimate and report measurement uncertainty (2 Credits) 105768L4 (P4.3 - 4)	Develop procedures for estimation of measurement uncertainty in accordance with the ISO Guide to the Expression of Uncertainty in Measurement (4 Credits) 105757L5 (P4.3 - 7)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Test Method Development and Operation Planning					Develop procedures for estimation of measurement uncertainty in chemical testing using EURACHEM approach (4 Credits) 105758L5 (P4.3 - 8)		
					Develop procedures for estimation of measurement uncertainty in microbiological testing using EURACHEM/MIKE approach (4 Credits) 105759L5 (P4.3 - 9)		
					Formulate method validation protocol (2 Credits) 105760L5 (P4.3 - 11)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Test Method Development and Operation Planning					Prepare method validation reports (2 Credits) 105763L5 (P4.3 - 12)		
					Interpret international standards and regulatory requirements (1 Credit) 105764L5 (P4.3 - 13)		
					Evaluate customer's requests on testing services (2 Credits) 105765L5 (P4.3 - 14)		

Functional Matrix for the Testing, Inspection and Certification Industry

Physical and Mechanical Testing (Toys and Hardlines)				Evaluate the construction of products by visual inspection (consumer products) (2 Credits) 105853L4 (P4.3 - 133)			
				Perform acoustic measurements (consumer products) (2 Credits) 105854L4 (P4.3 - 134)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Physical and Mechanical Testing (Textiles and Garments)				Perform fabric construction tests (2 Credits) 105856L4 (P4.3 - 136)	Perform evaluation tests (4 Credits) 105855L5 (P4.3 - 151)		
				Perform fabric strength and performance tests (4 Credits) 105857L4 (P4.3 - 137)			
				Perform fibre analysis (4 Credits) 105858L4 (P4.3 - 139)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Physical and Mechanical Testing (Textiles and Garments)				Perform care performance tests (4 Credits) 105859L4 (P4.3 - 141)			
				Perform colour fastness tests (4 Credits) 105860L4 (P4.3 - 142)			
				Perform flammability tests (textiles and garments) (4 Credits) 105861L4 (P4.3 - 144)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Physical and Mechanical Testing (Textiles and Garments)				Perform feather and down analysis (2 Credits) 105862L4 (P4.3 - 146)			
				Perform garment trim tests (2 Credits) 105863L4 (P4.3 - 147)			
				Perform footwear tests (2 Credits) 105864L4 (P4.3 - 149)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Physical and Mechanical Testing (General Consumer Products)				Perform physical tests on pharmaceutical products (2 Credits) 105866L4 (P4.3 - 153)		Select test methods and measuring instruments (physical and mechanical testing) (2 Credits) 105865L6 (P4.3 - 155)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Data Collection, Analysis and Interpretation			Record and present data (2 Credits) 105873L3 (P4.3 - 156)	Apply statistical calculations to measurement data (2 Credits) 105871L4 (P4.3 - 157)	Review test results (2 Credits) 105867L5 (P4.3 - 159)	Validate laboratory information management system (4 Credits) 105869L6 (P4.3 - 161)	
				Process data (2 Credits) 105872L4 (P4.3 - 158)	Interpret test results (2 Credits) 105868L5 (P4.3 - 160)	Validate laboratory self-developed software (2 Credits) 105870L6 (P4.3 - 162)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Quality Assurance of Test Results				Implement laboratory quality control procedures (2 Credits) 105878L4 (P4.3 - 163)	Formulate quality control protocol for monitoring the validity of tests (4 Credits) 105874L5 (P4.3 - 166)		
				Control reference materials and working standards (2 Credits) 105879L4 (P4.3 - 164)	Evaluate subcontractor laboratory (2 Credits) 105875L5 (P4.3 - 167)		
				Verify critical consumables (2 Credits) 105880L4 (P4.3 - 165)	Control purchasing of services and supplies (2 Credits) 105876L5 (P4.3 - 168)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Quality Assurance of Test Results					Organise and implement proficiency testing activities (2 Credits) 105877L5 (P4.3 - 169)		
					Control laboratory documents and records (2 Credits) 105994L5 (P4.3 - 171)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Measurement Traceability				Calibrate and maintain reference standards (2 Credits) 105889L4 (P4.3 - 172)	Formulate calibration programme for reference standards (2 Credits) 105881L5 (P4.3 - 177)		
				Verify and maintain reference materials (2 Credits) 105890L4 (P4.3 - 173)	Formulate verification programme for reference materials (2 Credits) 105882L5 (P4.3 - 178)		
				Verify and maintain reference and working cultures (2 Credits) 105891L4 (P4.3 - 175)	Formulate verification programme for reference and working cultures and sub-cultures (2 Credits) 105883L5 (P4.3 - 179)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Measurement Traceability				Handle and perform equipment calibration (2 Credits) 105892L4 (P4.3 - 176)	Formulate equipment calibration plan (2 Credits) 105884L5 (P4.3 - 180)		
					Develop equipment calibration methods (4 Credits) 105885L5 (P4.3 - 181)		
					Select competent laboratories for calibration of equipment and reference standards (2 Credits) 105886L5 (P4.3 - 182)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Measurement Traceability					Evaluate calibration results of equipment and reference standards (2 Credits) 105887L5 (P4.3 - 183)		
					Select and handle certified reference materials (2 Credits) 105888L5 (P4.3 - 184)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Equipment Maintenance			Handle and transport equipment (1 Credit) 105895L3 (P4.3 - 185)	Perform equipment maintenance and performance checks (2 Credits) 105894L4 (P4.3 - 186)	Formulate equipment maintenance plan (2 Credits) 105893L5 (P4.3 - 187)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Test Result Reporting					Authorise test results and reports (2 Credits) 105896L5 (P4.3 - 188)		
					Investigate complaints and appeals on testing services (2 Credits) 105897L5 (P4.3 - 189)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Laboratory Quality System Development						Formulate laboratory quality management system (6 Credits) 105898L6 (P4.3 - 191)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Laboratory Quality System Implementation					Implement laboratory quality management system (2 Credits) 105899L5 (P4.3 - 193)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Laboratory Quality System Monitoring					Conduct management review of laboratory (2 Credits) 105902L5 (P4.3 - 194)	Monitor and review implementation of laboratory quality management system (2 Credits) 105900L6 (P4.3 - 196)	
					Conduct internal audit of laboratory quality system (2 Credits) 105903L5 (P4.3 - 195)	Manage and handle nonconforming testing work (2 Credits) 105901L6 (P4.3 - 197)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Testing Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Laboratory Quality System Maintenance				Implement corrective actions for testing services (2 Credits) 105904L4 (P4.3 - 198)			
				Implement preventive actions for testing services (2 Credits) 105905L4 (P4.3 - 199)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Ethical Management				Implement ethical practices (2 Credits) 105961L4 (P4.3 - 259)	Monitor the implementation of ethical practices (2 Credits) 105960L5 (P4.3 - 260)	Formulate ethical management policy (2 Credits) 105956L6 (P4.3 - 261)	
						Establish code of conduct for testing services (2 Credits) 105957L6 (P4.3 - 262)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Environmental Protection				Monitor environmentally sustainable work practices (2 Credits) 105964L4 (P4.3 - 265)	Implement environmental management system (2 Credits) 105963L5 (P4.3 - 266)	Formulate environmental management system and workplace environmental policy (4 Credits) 105962L6 (P4.3 - 267)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Occupational Safety and Health		Master terminology related to testing / inspection / certification (1 Credit) 105975L2 (P4.3 - 269)	Maintain laboratory / field workplace safety (2 Credits) 105973L3 (P4.3 - 271)	Implement occupational safety and health supervision (2 Credits) 105969L4 (P4.3 - 273)	Establish occupational safety and health system and guidelines (2 Credits) 105966L5 (P4.3 - 277)	Formulate occupational safety and health policy and improvement plans (2 Credits) 105965L6 (P4.3 - 280)	
		Follow hygiene procedures (1 Credit) 105976L2 (P4.3 - 270)	Handle and investigate general industrial accidents (1 Credit) 105974L3 (P4.3 - 272)	Monitor occupational safety and health system (2 Credits) 105970L4 (P4.3 - 274)	Establish chemical waste handling procedures (1 Credit) 105967L5 (P4.3 - 278)		
				Handle and dispose of chemical wastes (2 Credits) 105971L4 (P4.3 - 275)	Perform risk assessment for laboratory / site work (2 Credits) 105968L5 (P4.3 - 279)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Occupational Safety and Health				Identify hazards associated with testing / inspection / certification activities (1 Credit) 105972L4 (P4.3 - 276)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Risk Management					Develop risk management strategies (2 Credits) 105978L5 (P4.3 - 281)	Formulate risk management plans (2 Credits) 105977L6 (P4.3 - 283)	
					Implement crisis management plans (2 Credits) 105979L5 (P4.3 - 282)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Human Resources Management				Develop and implement staff training and development programmes (2 Credits) 105982L4 (P4.3 - 284)	Recruit and retain competent personnel (2 Credits) 105981L5 (P4.3 - 285)	Formulate staff training and people development plan (2 Credits) 105980L6 (P4.3 - 286)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Laboratory / On-site Testing

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Customer Service			Interact and exchange information with customers (2 Credits) 105985L3 (P4.3 - 287)	Follow up feedback from customers (2 Credits) 105984L4 (P4.3 - 288)	Handle and resolve customer service problems (2 Credits) 105983L5 (P4.3 - 289)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Inspection Method Development and Preparation			Prepare work documents for conducting inspection (1 Credit) 105914L3 (P4.3 - 201)	Identify equipment and resources requirement for conducting inspection (2 Credits) 105911L4 (P4.3 - 202)	Develop inspection methods from international standards (2 Credits) 105906L5 (P4.3 - 205)		
				Identify items and samples for inspection (2 Credits) 105912L4 (P4.3 - 203)	Develop non-standard inspection methods (2 Credits) 105907L5 (P4.3 - 206)		
					Define defect classification and acceptance criteria (2 Credits) 105913L4 (P4.3 - 204)	Manage inspection methods (2 Credits) 105908L5 (P4.3 - 207)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Inspection Method Development and Preparation					Evaluate customer's requests on inspection services (2 Credits) 105909L5 (P4.3 - 208)		
					Formulate inspection plans (2 Credits) 105910L5 (P4.3 - 209)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Conducting Inspection			Record inspection observations and findings (2 Credits) 105919L3 (P4.3 - 210)	Perform on-site inspection of production processes / delivery of services (4 Credits) 105916L4 (P4.3 - 211)	Supervise on-site inspection (2 Credits) 105915L5 (P4.3 - 214)		
				Inspect items and samples (2 Credits) 105917L4 (P4.3 - 212)			
				Perform compliance inspection on materials (2 Credits) 105918L4 (P4.3 - 213)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Quality Assurance of Inspection Results				Implement inspection quality control procedures (2 Credits) 105921L4 (P4.3 - 215)	Formulate quality control protocol for monitoring inspection results (2 Credits) 105920L5 (P4.3 - 216)		
					Control inspection documents and records (2 Credits) 105991L5 (P4.3 - 217)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Operations

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Inspection Result Reporting					Authorise inspection results and reports (2 Credits) 105922L5 (P4.3 - 218)		
					Investigate complaints and appeals on inspection services (2 Credits) 105923L5 (P4.3 - 219)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Inspection Quality System Development						Formulate quality management system for inspection services (6 Credits) 105924L6 (P4.3 - 221)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Inspection Quality System Implementation					Implement inspection quality management system (2 Credits) 105925L5 (P4.3 - 222)		
					Evaluate subcontractor of inspection activities (2 Credits) 105926L5 (P4.3 - 223)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Inspection Quality System Monitoring					Conduct management review on inspection services (2 Credits) 105927L5 (P4.3 - 224)		
					Conduct internal audit of inspection services (2 Credits) 105928L5 (P4.3 - 225)		
					Manage and handle nonconforming inspection work (2 Credits) 105929L5 (P4.3 - 226)		

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Inspection Quality Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Inspection Quality System Maintenance				Implement corrective actions and preventive actions for inspection services (2 Credits) 105930L4 (P4.3 - 227)			

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Ethical Management				Implement ethical practices (2 Credits) 105961L4 (P4.3 - 259)	Monitor the implementation of ethical practices (2 Credits) 105960L5 (P4.3 - 260)	Formulate ethical management policy (2 Credits) 105956L6 (P4.3 - 261)	
						Establish code of conduct for inspection services (2 Credits) 105958L6 (P4.3 - 263)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Functional Area: Operation Management

QF Level Sub-Functional Area	Level 1	Level 2	Level 3	Level 4	Level 5	Level 6	Level 7
Environmental Protection				Monitor environmentally sustainable work practices (2 Credits) 105964L4 (P4.3 - 265)	Implement environmental management system (2 Credits) 105963L5 (P4.3 - 266)	Formulate environmental management system and workplace environmental policy (4 Credits) 105962L6 (P4.3 - 267)	

Functional Matrix for the Testing, Inspection and Certification Industry

Branch: Inspection

Units of Competency for Laboratory / On-site Testing - Testing Operations

Unit of Competency**Functional Area: Testing Operations**

Title	Validate test methods
Code	105761L4
Range	This unit of competency (UoC) covers the ability to validate laboratory-developed / non-standard test method according to authorised method validation protocol to ensure that the test method is based on sound scientific principles and is fit for the purpose for which it is to be used in testing laboratories.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Determine types and quantities of data / information required for method validation <ul style="list-style-type: none"> • Employ the principles, concepts, accreditation requirements, traceability and statistical evaluation of results related to method validation. • Determine types and quantities of data / information required. • Ensure that equipment calibration complies with appropriate standards. • Confirm that the test method has an acceptable level of uncertainty. 2. Validate test method according to authorised validation protocol <ul style="list-style-type: none"> • Ensure validation protocol is authorised by appropriate personnel. • Validate test method according to validation protocol including: <ul style="list-style-type: none"> • conduct literature searches on background of testing materials, • start up, set up/optimize, calibrate and operate equipment to manufacturer's specifications, • prepare test samples and standards for validation, • carry out validation tests according to the validation protocol. 3. Exhibit professionalism <ul style="list-style-type: none"> • Recommend staff training need appropriately. • Recommend update of relevant documentation as a result of the validation.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • validate the laboratory-developed / non-standard test method as fit for purpose according to the authorised validation protocol.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Verify test methods
Code	105762L4
Range	This unit of competency (UoC) covers the ability to verify the standard test method for confirmation, through the provision of objective evidence, that specified requirements have been fulfilled in testing laboratories.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Describe procedures for verification of test method adopted from international/national standard <ul style="list-style-type: none"> • Determine parameters of standard test method to be verified, e.g. equipment, reference materials / standards and/or reagents required, environmental conditions, method performance, staff competence to perform the test. • Identify performance characteristics for system suitability specifications established for test method, e.g.: <ul style="list-style-type: none"> • method blanks or un-inoculated media to assess contamination, • laboratory control samples to assess accuracy, • precision based on the analysis of duplicates, • calibration check standards analysed periodically in the analytical batch for quantitative analysis, • monitoring quality control samples through the use of control charts. • Employ the principles, concepts, accreditation requirements, traceability and statistical evaluation of results related to method verification. • Apply the concepts of uncertainty to the verification procedures. 2. Verify test method adopted from international/national standard <ul style="list-style-type: none"> • Select appropriate technique for method performance determination, e.g.: <ul style="list-style-type: none"> • calibration using reference standards and reference materials, • comparison of results achieved with other methods, • inter-laboratory comparisons, • systematic assessment of the factors influencing the result, • assessment of uncertainty of results based on scientific understanding of the theoretical principles of the method and practical experience. • Verify test method by using selected technique and analysing appropriate performance characteristics. • Evaluate method verification results and, if any, the associated uncertainties by using appropriate statistical techniques to confirm that the specified requirements of test method have been fulfilled. 3. Exhibit professionalism <ul style="list-style-type: none"> • Maintain records of verification of test method that meet the requirements of intended application.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • verify the standard test method by using appropriate technique and analysing its performance characteristics to confirm that specified requirements of the test method have been fulfilled.
Remark	

Unit of Competency

Functional Area: Testing Operations

Title	Estimate and report measurement uncertainty
Code	105768L4
Range	This unit of competency (UoC) covers the abilities to estimate and report measurement uncertainty for laboratory / on-site testing activities or calibration activities relative to specified limits/tolerance of the test / calibration and specifications of customer's request according to the predetermined procedures.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of procedures for estimating measurement uncertainty and determine the need for reporting measurement uncertainty <ul style="list-style-type: none"> • Differentiate the applications of various statistical tests • Identify steps in the measurement, test or calibration involved. • Determine customer's request for need of reporting measurement uncertainty. • Relate validity of test results in association with measurement uncertainty. • Determine the uncertainty interval and results that are considered as inconclusive. 2. Estimate and report measurement uncertainty <ul style="list-style-type: none"> • Specify an equation for the measurement and list uncertainty components that are associated with each input in the equation. • Use calibration reports, manufacturer's specifications, quality control and validation data, and experimental data to collect other available information on the uncertainty components. • Calculate the standard uncertainty of each input factor and the combined uncertainty. • Calculate the expanded uncertainty of the reported results. • Obtain the uncertainty interval as stated in the test standard. • Report results and measurement uncertainty (expanded uncertainty) according to the test standard/specifications. • State all necessary information for the interpretation of the reported uncertainty including coverage factor and confidence interval. • Report compliance against specifications/limits taking into consideration of measurement uncertainty and state compliance only for conclusive results. 3. Exhibit professionalism <ul style="list-style-type: none"> • Report measurement uncertainty and necessary information as required by the test / calibration.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • determine whether the uncertainty in results should be reported by analysing the customer's request and considering the validity of test results and inconclusive interval, • estimate the uncertainty of measurement, test or calibration and necessary information relative to the tolerance or required accuracy of the test or calibration, • report the compliance of the sample under test against specifications for results outside the inconclusive interval.
Remark	

Unit of Competency

Functional Area: Testing Operations

Title	Adopt test methods and procedures from standard methods
Code	105755L5
Range	This unit of competency (UoC) covers the abilities to develop test methods and procedures from international/national standards in testing laboratories to meet enterprise and/or regulatory requirements and to fulfil customer's needs.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Research and determine appropriate international/national standards for laboratory / on-site testing <ul style="list-style-type: none"> • Research and review relevant international/national standards. • Evaluate resource, enterprise and regulatory requirements for proposed test methods and procedures to be developed. • Investigate possible alternative standards and choose the most appropriate standard. 2. Adopt test methods and procedures from international/national standards <ul style="list-style-type: none"> • Adopt and develop test methods and procedures according to relevant requirements. • Trial run the adopted test method. • Evaluate records to substantiate and justify the chosen test method. • Compile documents for test methods and associated standard operating procedures. • Obtain final approval for newly adopted test methods. • Issue approved test methods in conformance with international/national standards. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure adopted test methods and procedures meet enterprise and regulatory requirements and fulfil customer's need.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • adopt and develop test methods and procedures from relevant international/national standards to meet regulatory requirements and satisfy customer's needs, • compile documents of test methods and procedures for seeking approval and issue approved test methods in conformance with international/national standards.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Develop non-standard test methods
Code	105756L5
Range	This unit of competency (UoC) covers the abilities to develop new test methods and procedures that can meet enterprise requirements, regulatory testing requirements and/or customer's test requests in testing laboratories.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of theoretical and practical basis of test/analysis <ul style="list-style-type: none"> • Describe principles and practices of operation of a range of testing equipment. • Describe characteristics, capabilities and limitations of equipment. • Discuss relative advantages/disadvantages of different analytical methods. • Outline theoretical procedures for method development. • Describe method validation requirements. 2. Develop non-standard test methods to meet requirements <ul style="list-style-type: none"> • Interpret enterprise and regulatory testing requirements. • Analyse requirements for new analysis and procedures to meet testing briefs or request. • Evaluate resource requirements for proposed methods/procedures. • Investigate possible alternative methods and procedures and choose appropriate method/procedure by evaluating criteria, e.g.: <ul style="list-style-type: none"> • economic factors, • safety considerations, • resource factors, including equipment and personnel, • regulatory, accreditation and registration considerations. • Develop analytical test method to meet requirements. • Trial run method/procedure against test method/procedure requirements. • Validate test method/procedure. • Document analytical method/procedure and associated standard operating procedures (SOPs) and seek approval for issuance. • Issue new method/procedure according to enterprise procedures in consultation with appropriate expert if required. 3. Exhibit professionalism <ul style="list-style-type: none"> • Maintain records to substantiate and justify chosen method/procedure.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • interpret test requests to determine testing requirements, • develop new test methods and procedures to meet requirements by applying theoretical concepts and practical principles and critically eliminating other possible alternatives, • document and issue new method/procedure according to enterprise procedures.
Remark	This UoC should be used together with another UoC "Validate test methods (105761L4)".

Unit of Competency

Functional Area: Testing Operations

Title	Develop procedures for estimation of measurement uncertainty in accordance with the ISO Guide to the Expression of Uncertainty in Measurement
Code	105757L5
Range	This unit of competency (UoC) covers the abilities to develop procedures for estimating the measurement uncertainty in testing or calibration activities by interpreting the requirements in the ISO Guide to the Expression of Uncertainty in Measurement (ISO GUM) in testing laboratories.
Level	5
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge and principles of estimating the measurement uncertainty in accordance with ISO GUM <ul style="list-style-type: none"> • Command the knowledge of statistics, e.g. mean, standard deviation, variance, standard deviation of the mean, degrees of freedom. • Explain the applications of various significance tests, e.g. t-test, F-test, analysis of variance (ANOVA), standard deviation of prediction, linear regression. • Identify steps in the measurement, test or calibration involved. • Employ the principles and procedures of relevant measurements. • Determine the degree of rigour in estimation of measurement uncertainty to meet the requirements of intended use, test standards and/or regulatory specifications. • Examine and verify information on calibration certificates, specifications, repeated measurements and variations due to operation such as operators, environment conditions and setup. 2. Develop and document procedures for estimation of measurement uncertainty according to ISO GUM <ul style="list-style-type: none"> • Construct a mathematical model for the measurement. • Identify factors affecting the components of the model. • Determine the required confidence level. • Describe the method for estimating the standard uncertainty and sensitivity coefficient of each input factor. • Explain the approaches to determine the following parameters for the estimation: <ul style="list-style-type: none"> • combined uncertainties according to the law of propagation, • degree of freedom for each input factor and effective degree of freedom of final output, • expanded measurement uncertainty by multiplying the combined uncertainties with the coverage factor as devised from the effective degree of freedom. • Verify and document the procedures for estimation of measurement uncertainty in accordance with ISO Guide to the Expression of Uncertainty in Measurement. 3. Exhibit professionalism <ul style="list-style-type: none"> • Recommend improvement and control of test operation and use of equipment meeting the uncertainty requirement.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • analyse steps of measurement with the use of appropriate equipment, test or calibration involved in the testing or calibration activities, • construct a mathematical model and categorise input factors affecting the measurement uncertainty, • develop and document the procedures for estimation of measurement uncertainty by applying the knowledge of statistical tests and approaches in accordance with ISO Guide to the Expression of Uncertainty in Measurement (ISO GUM).
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Develop procedures for estimation of measurement uncertainty in chemical testing using EURACHEM approach
Code	105758L5
Range	This unit of competency (UoC) covers the abilities to develop procedures for estimating the measurement uncertainty in chemical testing using EURACHEM approach by evaluating all critical factors and the associated uncertainties in measurement steps in testing laboratories.
Level	5
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> Possess knowledge and principles of estimating measurement uncertainty in chemical testing <ul style="list-style-type: none"> Command the knowledge of statistics, e.g. mean, standard deviation, variance, standard deviation of the mean, degrees of freedom. Explain the applications of various significance tests, e.g. t-test, F-test, analysis of variance (ANOVA), standard deviation of prediction, linear regression. Employ the principles and procedures of relevant measurements. Interpret the approaches such as bottom up, top down and using data from collaborative study, based on the nature of the test methods and measurements. Determine the degree of rigour in estimation of measurement uncertainty to meet the requirements of intended use, test standards and/or regulatory specifications. Examine and verify information from calibration certificates, equipment/apparatus/reagent specifications, validation data from trueness, recovery and precision studies, and quality control data. Develop and document procedures for estimation of measurement uncertainty in chemical testing <ul style="list-style-type: none"> Select an appropriate approach for estimation of measurement uncertainty in chemical testing. Identify all critical factors affecting the overall measurement uncertainty. Estimate the standard uncertainty of each factor and eliminate duplication. Convert the standard uncertainty into relative standard uncertainty before combination. Expand and calculate the method uncertainty range at the regulatory limits or other limits for making critical decision. Critically control factors that contribute significantly to the measurement uncertainty to ensure the uncertainty satisfies regulatory tolerance/limits and/or specifications of test standards. Review and re-evaluate the uncertainty regularly taking into account of the quality control data and variations of operation. Document the procedures for estimation of measurement uncertainty in chemical testing Exhibit professionalism <ul style="list-style-type: none"> Consider all factors and estimate the measurement uncertainty appropriately and ensure its compliance with requirements of test standards and/or regulatory limits. Ensure the control of experimental parameters critical to the results.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> determine and justify the approaches for estimation of measurement uncertainty in chemical testing, identify all factors affecting the measurement uncertainty and critically control factors that contribute significantly to the overall measurement uncertainty, develop and document the procedures for estimation of measurement uncertainty by applying the knowledge of statistics and approaches in compliance with requirements of test standards and/or regulatory limits.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Develop procedures for estimation of measurement uncertainty in microbiological testing using EURACHEM/MIKE approach
Code	105759L5
Range	This unit of competency (UoC) covers the abilities to develop procedures for estimating the measurement uncertainty in microbiological testing using EURACHEM or “Uncertainty of Quantitative Determinations Derived by Cultivation of Microorganisms (MIKE)” approach by evaluating all critical factors and the associated uncertainties in measurement steps in testing laboratories.
Level	5
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <p>1. Possess knowledge and principles of estimating measurement uncertainty in microbiological testing</p> <ul style="list-style-type: none"> • Command the knowledge of statistics, e.g. mean, standard deviation, variance, standard deviation of the mean, degrees of freedom. • Explain the applications of various significance tests, e.g. t-test, F-test, analysis of variance (ANOVA), standard deviation of prediction, linear regression. • Interpret the approaches of estimation of measurement uncertainty in microbiological testing, e.g.: <ul style="list-style-type: none"> • EURACHEM, • “Uncertainty of Quantitative Determinations Derived by Cultivation of Microorganisms (MIKE)”, • approaches as stipulated in test standards. • Differentiate types of distribution of microorganisms, e.g. Poisson and negative binomial distribution and statistical manipulation of such distribution • Identify major factors affecting uncertainty of quantitative determination. • Examine and verify information on quantitative evaluation of media, intermediate precision and between operators precision. <p>2. Develop and document procedures for estimation of measurement uncertainty in microbiological testing</p> <ul style="list-style-type: none"> • Select an appropriate approach for estimation of measurement uncertainty in microbiological testing. • Identify factors other than precision affecting the uncertainty. • Determine the required confidence interval. • Outline the steps for estimation of measurement uncertainty including: <ul style="list-style-type: none"> • convert the data to logarithm form and calculate the intermediate, • precision based on duplicate determinations, • compute the uncertainty due to factors such as media and operators using statistical approach (pair comparison), • combine uncertainty of all factors, • calculate the uncertainty interval and convert back to CFU by anti-logging the uncertainty value. • Critically control other experimental factors, e.g. temperature of incubator, incubation time, storage temperature, maximum holding time of samples. • Review and re-evaluate the uncertainty regularly taking into account of quality control data and variations in operation. • Document the procedures for estimation of measurement uncertainty in microbiological testing. <p>3. Exhibit professionalism</p> <ul style="list-style-type: none"> • Consider all factors and estimate the measurement uncertainty appropriately. • Ensure the control of experimental parameters critical to the results.

Unit of Competency

Functional Area: Testing Operations

Assessment Criteria	The integrated outcome requirements of this UoC are the abilities to: <ul style="list-style-type: none">• select the appropriate approach for estimation of measurement uncertainty in microbiological testing,• evaluate all factors affecting the measurement uncertainty and control factors that contribute significantly to the overall measurement uncertainty,• develop and document the procedures for estimation of measurement uncertainty by applying the knowledge of microbiological testing and statistical methods in compliance with requirements of test standards.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Formulate method validation protocol
Code	105760L5
Range	This unit of competency (UoC) covers the ability to formulate validation protocol that can be adopted for test methods used in accredited testing laboratories. Validation protocol is a documented programme which provides a high degree of assurance that a specific test method will consistently produce a reliable result.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of test method validation parameters and acceptance criteria <ul style="list-style-type: none"> • Determine parameters of test method which should be validated and acceptance criteria for validating test method. • Justify those checks which should be considered to ensure performance characteristics of test method are scientifically sound, such as selectivity, linearity, range, sensitivity, limit of detection, limit of quantitation / practical quantitation limit, accuracy, precision, recovery, ruggedness, traceability, 2. Formulate method validation protocol <ul style="list-style-type: none"> • Develop test method validation protocol in consultation with appropriate personnel. • Recommend appropriate mathematical/statistical treatment of data for presenting data and results in appropriate formats in compliance with the performance characteristics. • Verify formulated validation protocol. • Authorise and issue method validation protocol according to enterprise procedures. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the formulated protocol can validate test methods that can consistently produce reliable results.
Assessment Criteria	The integrated outcome requirement of this UoC is the ability to: <ul style="list-style-type: none"> • formulate method validation protocol to validate test methods that are fit for purpose.

Unit of Competency

Functional Area: Testing Operations

Title	Supervise laboratory / on-site testing
Code	105767L5
Range	The unit of competency (UoC) covers the abilities to supervise testing operators performing testing activities in the laboratory / testing and investigations on site, monitor and optimise operational performance to ensure that products and services meet customer expectations.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <p>1. Possess knowledge of laboratory / on-site testing and key performance indicators of testing services</p> <ul style="list-style-type: none"> • Explain the standard operating procedures and technical details of sampling, testing, equipment and instrumentation within the work area. • Specify the legislation, standards and accreditation requirements relevant to laboratory / on-site testing. • Employ the principles of operational planning, efficient resource use and key performance indicators. • Command problem solving techniques, mentoring and coaching techniques and contingency planning skills. <p>2. Supervise and monitor laboratory / on-site testing</p> <ul style="list-style-type: none"> • Ensure that testing personnel follow all relevant procedures, regulations and standards. • Confirm that all technical work is performed in accordance with relevant standards, standard operating procedures and schedules. • Ensure that analytical results/data are checked, collated and distributed in accordance with enterprise requirements. • Monitor testing and sampling procedures for quality control in accordance with enterprise requirements. • Identify and resolve complex problems by using agreed problem solving strategies and act to prevent their recurrence. • Provide coaching and mentoring to support personnel who have difficulties in meeting targets for performance and/or resource usage. • Establish and maintain effective communication with all personnel and clients to ensure smooth and efficient operations. <p>3. Exhibit professionalism</p> <ul style="list-style-type: none"> • Ensure that testing personnel are competent to perform required tasks accurately and safely and organise training if required. • Identify health and safety risks associated with testing operations and promote the use of safe work procedures and protective equipment.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • supervise laboratory / on-site testing operations and personnel so that planned outcomes are achieved within agreed resource and performance parameters without compromising safety, quality and ethics, • monitor outputs, analyse processes, introduce ways to improve operations and motivate personnel to improve performance.
Remark	

Unit of Competency

Functional Area: Testing Operations

Title	Establish and evaluate laboratory operations in functional area
Code	105753L6
Range	This unit of competency (UoC) covers the abilities to plan, allocate and coordinate the tasks among laboratory personnel, to ensure quality assurance within the laboratories, to monitor the resource usage, to critically evaluate and report operations, and to develop new operations in testing laboratories.
Level	6
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of laboratory operations <ul style="list-style-type: none"> • Analyse the characteristics enterprise business, strategic and operational plans, laboratory services, customers, and quality assurance. • Employ the principles of budgeting, operational planning and efficient resource use. • Describe legislation, codes of practice, and standards relevant to the work area or function. • Command problem solving techniques and contingency planning, team leadership and development techniques, mentoring and coaching techniques. • Exercise judgement in allocation of tasks and work sequences. • Interpret the new/changed standards relating to laboratory services. 2. Establish and evaluate laboratory operations within functional area <ul style="list-style-type: none"> • Plan and organise daily work activities within functional area to ensure the smooth operation in the laboratory. • Allocate job tasks to laboratory personnel and assign the work sequences. • Establish resource requirements and performance management criteria. • Manage laboratory personnel within functional area and provide training opportunities for staff development. • Procure resources to achieve operational plans. • Critically evaluate laboratory operations and report findings to the management of enterprise. • Critically analyse and predict the market trend in the business of laboratory services to develop new operations in accordance with the new/changed standards. 3. Exhibit professionalism <ul style="list-style-type: none"> • Identify and resolve work problems. • Monitor and optimise operational performance of the laboratory.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • establish laboratory operational plans and performance management criteria, • manage laboratory operations and personnel so that planned outcomes are achieved within agreed resources, • monitor outputs, analyse processes to identify work problems, and formulate ways to improve operations, • develop new operations for laboratory services by analysing the market trend and interpreting the new/changed standards.

Title	Perform basic chemical tests and procedures
Code	105791L3
Range	This unit of competency (UoC) covers the abilities to carry out chemical tests and measurements according to test methods to record data in testing laboratories.
Level	3
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> Possess knowledge of metrology and chemical test methods <ul style="list-style-type: none"> Apply the concepts of metrology including repeatability, precision, accuracy, significant figures, sources of error, uncertainty and traceability. Describe the purpose of performing laboratory testing and the requirements of test method. Apply the principles of basic analytical techniques and describe the operation of the equipment involved, e.g.: <ul style="list-style-type: none"> gravimetric analysis, titrimetric analysis, basic separation methods including precipitation, filtration, gravity separation, distillation, solvent extraction and chromatography, drying and ashing, electrical conductivity and pH, dissolved oxygen, visual/optical tests of appearance, colour, texture, turbidity, refractive index. Describe test method calibration procedures and method precision. Describe calculation methods, including appropriate units, uncertainties, balancing equations, and the concentration of the solution given the chemical reaction for the titration. Identify potential safety hazards associated with test procedures, operating equipment and handling chemicals and glassware. Perform tests and/or measurements on samples using appropriate equipment <ul style="list-style-type: none"> Apply the appropriate test method and equipment for performing the requested test. Record sample description, ensure sample compliance with test method requirements, and handle discrepancies. Set up and check the performance of equipment in accordance with test method requirements. Check the calibration status of equipment and quarantine out of calibration equipment. Carry out tests/procedures on all samples, calibration standards and quality control checks if appropriate, in accordance with specified or validated test methods. Record, perform calculations and document test data in accordance with standard operating procedures. Exhibit professionalism <ul style="list-style-type: none"> Complete all tests within the required timeline meeting quality, accuracy and safety requirements. Maintain security, integrity and traceability of all samples, data and documentation.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> carry out chemical tests and procedures by using appropriate reagents and equipment according to the requirements of the test method and complete the tests within agreed time limit, record and calculate test data accurately and legibly and document test data properly to maintain their security and traceability.

Level	4
Credit	6 (for reference only)
Competency	<p>Performance Requirements</p> <p>1.Possess knowledge of indoor air quality (IAQ) objectives, physical / chemical natures of indoor air-borne particles and their measurement principles</p> <ul style="list-style-type: none"> • Identify the IAQ objectives for offices and public places and general guidelines for setting indoor sampling and monitoring locations. • Specify the sampling requirements for indoor air quality measurements. • Identify relevant types of air handling unit (AHU) system and possess knowledge of air-conditioning engineering. • Describe the assessment methods for IAQ including real-time measurements and integrated sampling with subsequent laboratory analysis. • Apply the measurement principles of individual IAQ parameters. • Describe physical properties (e.g. sizes) of various air-borne particles including respirable suspended particulates (RSPs). • Identify the chemical nature and properties (e.g. density, water solubility) of various air-borne particles including: <ul style="list-style-type: none"> • total volatile organic compounds (TVOC), • formaldehyde, • carbon dioxide (CO₂), carbon monoxide (CO), nitrogen dioxide (NO₂), ozone (O₃), • radon, • other air-borne particles as required by international and/or national standards. • Describe the working principles and operation of equipment used for indoor air quality measurements, e.g.: <ul style="list-style-type: none"> • psychrometer / hygrometer / anemometer for measurement of temperature, relative humidity and air movement, • real-time monitors / analysers for CO₂, CO, NO₂, O₃ and radon, • microbial air samplers, • air sampler for RSPs, • active or passive sampling followed by HPLC analysis for formaldehyde, • air sampling (by passivated canisters or solid sorbents) followed by mass selective detector (MSD) for TVOC, • active or passive sampling followed by FIA analysis for NO₂, • other equipment as required by international and/or national standards. • Apply the concepts of uncertainty and equipment calibration IAQ measurements. <p>2.Perform indoor air quality measurement and analysis</p> <ul style="list-style-type: none"> • Determine the number of sampling points and identify the monitoring sites within the premises under investigation according to the guidelines. • Apply appropriate test methods and measuring equipment in compliance with IAQ measurement requirements. • Carry out routine performance and calibration checks of equipment according to manufacturer's instruction and/or relevant standard to ensure they are ready for IAQ measurements. • Operate appropriate air sampling equipment and real-time monitors / analysers to carry out indoor air quality analysis independently in each monitoring site within the premises. • Monitor all the IAQ parameters (except air movement) outdoors in close proximity to the fresh air intakes of the investigation areas for evaluating the indoor air measurement data. • Record accurate and reliable IAQ measurement data by conducting sufficient measurements to determine the indoor air quality of the premises. <p>3.Exhibit professionalism</p> <ul style="list-style-type: none"> • Ensure integrity and confidentiality of measurement data and information by observing the relevant code of conduct.

Unit of Competency

Functional Area: Testing Operations

Assessment Criteria	The integrated outcome requirements of this UoC are the abilities to: <ul style="list-style-type: none">• determine the number and locations of monitoring sites within the premises under investigation according to the general guidelines,• carry out indoor air quality measurement and analysis independently by applying appropriate measuring equipment and air sampling followed by analysis in a testing laboratory,• record accurate and reliable measurement data to determine the indoor air quality in compliance with current IAQ standards and limits.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Perform complex tests to measure chemical properties of materials
Code	105790L4
Range	This unit of competency (UoC) covers the abilities to isolate analytes from complex matrices, carry out multi-stage and/or multi-component analysis on the analytes independently by applying knowledge of analytical chemistry, and record and analyse test data accurately in testing laboratories.
Level	4
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <p>Possess knowledge of analytical chemistry to perform complex tests</p> <ul style="list-style-type: none"> • Apply the principles and concepts underpinning the analysis, e.g.: <ul style="list-style-type: none"> • interference on analyte behaviour such as ionisation, complexation, precipitation, masking, • quantification methods such as internal standards, standard additions, recovery checks. • Identify the test methods and principles for inorganic analysis. • Identify the test methods and principles for organic analysis. • Describe the functions of key components of equipment, e.g. ion selective electrodes, thin layer chromatography, spectrometer, polarimeter. • Apply the equipment calibration, maintenance and troubleshooting techniques. • Describe sampling, sub-sampling and sample preparation procedures. • Describe the steps for calculating analyte concentrations with appropriate accuracy, precision, units and uncertainty. <p>2. Perform multi-staged and/or multi-component analysis</p> <ul style="list-style-type: none"> • Determine the test request and identify sample characteristics that may affect selection and application of test conditions and methods. • Apply appropriate test method and conditions in compliance with test requirements. • Prepare a representative analytical portion of the laboratory sample to reduce the sample complexity and for validation checks. • Set up and optimise equipment for measurements to suit sample/test requirements. • Carry out routine performance check of equipment according to manufacturer's instruction and/or relevant standard to ensure it is ready for chemical tests • Measure analyte response for calibration standards, validation and quality control checks, and samples independently according to requirements of test method. • Conduct sufficient measurements to obtain accurate and reliable test data. <p>3. Exhibit professionalism</p> <ul style="list-style-type: none"> • Troubleshoot analytical procedures or equipment in case of any atypical observations/data/results being identified during sample analysis or performance check. • Maintain security, integrity and traceability of test data, samples and documentation.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • carry out multi-stage preparation and pre-treatment of the sample, • set up, optimise and operate equipment to carry out multi-stage and/or multi-component analysis on the sample independently according to the test method, • record and analyse accurate and reliable test data by conducting sufficient measurements and verifying validation and quality control check data.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Apply mass spectrometric and hyphenated techniques to chemical testing
Code	105780L5
Range	This unit of competency (UoC) covers the abilities to optimise and operate hyphenated instruments associated with mass spectrometer independently, record accurate test data, and interpret mass spectrometric data for chemical analysis by applying the mass spectrometric principles and concepts in testing laboratories.
Level	5
Credit	6 (for reference only)
Competency	<p>Performance Requirements</p> <p>1. Possess knowledge of hyphenated techniques with mass spectrometer</p> <ul style="list-style-type: none"> • Employ the principles and concepts of hyphenated techniques. • Apply the principles and concepts of mass spectrometric techniques and their applications to chemical testing. • Describe the construction and explain the functions of key components of hyphenated instruments associated with mass spectrometer including: <ul style="list-style-type: none"> • gas chromatography-mass spectrometer (GC-MS), • liquid chromatography-mass spectrometer (LC-MS). • Describe the operation, interface, selectivity, sensitivity, linear range, typical applications and interferences (e.g. spectral interferences) of hyphenated mass spectrometric instruments. • Explain the routine performance check and mass tuning of hyphenated mass spectrometric instruments. • Outline the steps of applying hyphenated mass spectrometric techniques for identifying and quantifying analytes to give results in appropriate accuracy, precision, uncertainty and units. • Differentiate the applications of various types of hyphenated techniques for qualitative and quantitative analyses according to the nature and characteristics of samples and analytes. • Apply the concepts of uncertainty and instrument calibration to mass spectrometric analysis. <p>2. Apply and operate hyphenated mass spectrometric instruments for chemical analysis</p> <ul style="list-style-type: none"> • Determine the test request and identify sample characteristics that may affect the chemical analysis. • Select appropriate test method and hyphenated mass spectrometric instrument in compliance with test requirements. • Carry out routine performance check of the selected hyphenated mass spectrometric instrument according to manufacturer's instruction and/or relevant standard to ensure it is ready for chemical analysis. • Set up the hyphenated mass spectrometric instrument and optimise its performance by using appropriate calibration standards and adjusting instrumental operating parameters. • Carry out hyphenated mass spectrometric analysis on the sample independently according to the test method by measuring analyte responses for standards, validation and quality control checks, and the sample. • Record accurate and reliable mass spectrometric data by conducting sufficient measurements. • Interpret mass spectrometric data for chemical analysis. <p>3. Exhibit professionalism</p> <ul style="list-style-type: none"> • Troubleshoot analytical procedures or hyphenated mass spectrometric instruments in case of any atypical observations/data/results being identified during sample analysis or performance check. • Ensure integrity and confidentiality of laboratory data and information by observing the code of conduct of the laboratory.

Unit of Competency

Functional Area: Testing Operations

Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • apply, optimise and operate the hyphenated mass spectrometric instrument independently to carry out chemical analysis of the sample according to the test method and sample characteristics, • record and verify mass spectrometric data by conducting sufficient measurements and analysing validation and quality control check data, • interpret mass spectrometric data for chemical analysis.
Remark	<p>Practitioners are required to have prior knowledge of the following UoC:</p> <ul style="list-style-type: none"> • Apply chromatographic techniques to chemical testing (TCTETO405A)

Unit of Competency

Functional Area: Testing Operations

Title	Perform chemical analysis on food
Code	105781L5
Range	This unit of competency (UoC) covers the abilities to carry out various chemical tests independently to analyse the nutrients, ingredient composition, preservatives and additives of foods and critically evaluate the compliance of food against regulatory requirements in testing laboratories. This UoC also includes the identification and quantification of chemical contaminants in food products.
Level	5
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of various tests for analysing food nutrients, chemical composition of common food and beverages, food preservatives and additives, and chemical contaminants in food <ul style="list-style-type: none"> • Explain the functional structures and properties of proteins, lipids, carbohydrates, vitamins, minerals and fibre. • Identify the chemical composition of food and search for appropriate test methods that can determine their chemical composition. • Describe the properties of common food additives and preservatives and identify appropriate methods for their identification and quantification. • Determine possible chemical food contaminants (e.g. heavy metals and pesticides) and their detection methods. • Specify local food safety ordinance and food labelling regulations and describe their implications for nutritional claims. • Identify international standards (e.g. Codex Alimentarius) and regulatory requirements on foods. • Employ the principles and concepts related to instrument performance check and operation, material preparation and testing of foods. • Describe the sampling and sub-sampling procedures for food testing. • Outline the steps in identifying and quantifying the analytes of food testing to give results in appropriate accuracy, precision, uncertainty and units. • Apply the concepts of uncertainty and instrument calibration to food testing. 2. Perform chemical analysis on food <ul style="list-style-type: none"> • Evaluate the test request and sample characteristics. • Apply appropriate test method/standard in compliance with requirements of the test request and sample characteristics. • Select appropriate analytical instrument according to the test method/standard. • Carry out routine performance check of the selected analytical instrument according to manufacturer's instruction and/or relevant standard to ensure it is ready for food testing. • Set up the selected analytical instrument and optimise its performance by using appropriate calibration standards and adjusting instrumental operating parameters to suit sample and test requirements. • Evaluate the appropriateness of the sample for food testing. • Carry out appropriate test on the analyte in the food sample independently by measuring analyte response for standards, validation and quality control checks, and the sample. • Conduct sufficient measurements to record accurate and reliable test data with appropriate accuracy, precision and units. • Evaluate test results critically to confirm the compliance of food sample. 3. Exhibit professionalism <ul style="list-style-type: none"> • Troubleshoot analytical procedures or analytical instruments in case of any atypical observations/data/results being identified during sample analysis or performance check. • Ensure integrity and confidentiality of laboratory data and information by observing the code of conduct of the laboratory.

Unit of Competency

Functional Area: Testing Operations

<p>Assessment Criteria</p>	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • select and apply suitable test method/standard and analytical instrument for food testing by analysing the test request from the customer, • set up, optimise and operate the analytical instrument independently to carry out chemical analysis on food product independently according to the test method/standard and sample characteristics, • evaluate test results critically for the compliance of food product against relevant standards and regulatory requirements.
<p>Remark</p>	<p>Practitioners are required to have prior knowledge of the following UoCs:</p> <ul style="list-style-type: none"> • Apply atomic spectrometric techniques to chemical testing (TCTETO406A) • Apply chromatographic techniques to chemical testing (TCTETO405A) • Apply inductively coupled plasma spectroscopic techniques to chemical testing (TCTETO407A) • Apply mass spectrometric and hyphenated techniques to chemical testing (TCTETO545A) • Apply molecular spectrometric techniques to chemical testing TCTETO408A) • Perform complex chemical tests to measure chemical properties of materials (TCTETO411A)

Unit of Competency**Functional Area: Testing Operations**

Title	Perform chemical analysis on pharmaceutical products
Code	105782L5
Range	This unit of competency (UoC) covers the abilities to carry out chemical analysis on pharmaceutical products independently by applying knowledge of analytical chemistry and instrumental analysis, record accurate test data and critically evaluate test results in testing laboratories.
Level	5
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> Possess knowledge of analytical chemistry and assays of pharmaceutical products <ul style="list-style-type: none"> Apply the principles and concepts of chemical analysis for pharmaceutical products. Specify the identification and assays of selected pharmaceutical products in relevant pharmacopoeia / test standards, e.g.: <ul style="list-style-type: none"> British Pharmacopoeia (BP), United States Pharmacopoeia (USP), European Pharmacopoeia (EP), Pharmacopoeia of the People's Republic of China (ChP). Determine pharmaceutical products and corresponding test methods routinely used in testing laboratories including: <ul style="list-style-type: none"> purpose and principles of test, properties of pharmaceutical products under test, key preparation/measurement steps in test method, calculation steps to give results in appropriate accuracy, precision, units and uncertainty, expected values for sample type. Explain the operation of equipment used for chemical analysis of selected pharmaceutical products, e.g. chromatography, spectrometry, electrochemical instruments. Explain the importance of traceability of samples, test pieces, test data and results. Describe the procedures for equipment calibration and performance check. Perform chemical analysis on pharmaceutical products <ul style="list-style-type: none"> Evaluate the test request and analyse sample characteristics that may affect selection and application of test methods. Select and apply appropriate assay method and equipment in compliance with test requirements for selected pharmaceutical products. Prepare a representative analytical portion of the laboratory sample to reduce the sample complexity and eliminate matrix effects. Carry out routine performance check of equipment according to manufacturer's instruction and/or relevant standard to ensure it is ready for chemical tests of pharmaceutical products. Set up, optimise and check the calibration status of equipment for measurements to suit sample/test requirements. Carry out appropriate chemical tests on selected pharmaceutical product independently by measuring analyte response for calibration standards, validation and quality control checks, and the sample according to the requirements of test method. Record accurate and reliable data and/or observations and evaluate test results for the compliance of pharmaceutical product. Exhibit professionalism <ul style="list-style-type: none"> Troubleshoot analytical procedures or equipment in case of any atypical observations/data/results being identified during sample analysis or performance check. Ensure integrity and confidentiality of laboratory data and information by observing the code of conduct of the laboratory.

Unit of Competency

Functional Area: Testing Operations

Title	Prepare equipment and facilities for biological / microbiological testing
Code	105811L3
Range	This unit of competency (UoC) covers the abilities to prepare equipment and facilities required for carrying out biological / microbiological tests in testing laboratories.
Level	3
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <p>1. Possess knowledge of the requirements of equipment and facilities for biological / microbiological testing</p> <ul style="list-style-type: none"> • Identify relevant standard operating procedures (SOPs) of equipment and facilities for biological / microbiological testing. • Describe the specifications and requirements of equipment and facilities, e.g.: <ul style="list-style-type: none"> • autoclave, • hot-air oven, • incubator, • freezer, • biohazard hood or laminar flow cabinet, • clean room. • Describe the maintenance checks and calibration procedures for the selected equipment and/or facilities. • Describe the serviceable conditions of equipment and facilities for carrying out biological/ microbiological tests. • Apply the recording and documentation system in the laboratory. <p>2. Prepare required equipment and facilities</p> <ul style="list-style-type: none"> • Identify the types and number of equipment and facilities according to the requirements of biological / microbiological test. • Carry out serviceability pre-/after-use checks on equipment and facilities according to appropriate SOPs. • Check whether the equipment and facilities are in the correct working order for the test, e.g.: <ul style="list-style-type: none"> • calibration status and requirements, • maintenance, • operating conditions. • Check the performance and precision of equipment and facilities in compliance with the specifications of the test. <p>3. Exhibit professionalism</p> <ul style="list-style-type: none"> • Maintain and update the records / relevant information such as use of equipment and facilities. • Check the conditions of the equipment/facilities after the test according to manufacturer's instructions or SOPs.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • estimate types and number of equipment and facilities required for the biological / microbiological test according to specific test method, requirements and procedures, • prepare required items of equipment and facilities by configuring and checking the working conditions of these items in accordance with the specifications of the test, • maintain, check, clean and record the equipment/facilities for their continuous uses after the biological / microbiological test.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Perform microbiological tests
Code	105802L4
Range	This unit of competency (UoC) covers the abilities to carry out microbiological tests independently for qualifying and/or quantifying the samples aseptically by applying appropriate microbiological procedures and skills in testing laboratories.
Level	4
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of theories and practical procedures on microbiological tests <ul style="list-style-type: none"> • Employ basic theories of aseptic procedures, cell biology, biochemistry and microbiology. • Apply technical principles on handling and processing of samples containing micro-organisms, e.g.: <ul style="list-style-type: none"> • culturing and sub-culturing, • separation, isolation and identification. 2. Perform microbiological tests on samples <ul style="list-style-type: none"> • Determine appropriate test methods based on the nature of sample. • Carry out appropriate processing techniques on microbiological specimens for qualifying sample, e.g.: <ul style="list-style-type: none"> • smearing and streaking, • staining, • biochemical and serological identification. • Carry out appropriate processing techniques on microbiological specimens for quantifying sample, e.g.: <ul style="list-style-type: none"> • cell seeding, • culturing and sub-culturing. • Prepare and use appropriate pure control organisms for microbiological work and aseptic applications. • Carry out tests on pure cultures independently to assist in the biochemical and immunological identification of micro-organisms. • Record the number and/or size of micro-organisms in samples accurately and analyse test results with an estimation of measurement uncertainty. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure all microbiological laboratory works are carried out in a safe and clean environment.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • carry out microbiological test on the sample independently by applying appropriate microbiological procedures and aseptic technique and using appropriate control organisms, • record test data and observations accurately, • analyse test results for characterisation of the sample for further laboratory works.

Unit of Competency

Functional Area: Testing Operations

Title	Perform physical and mechanical tests on bituminous materials
Code	105838L4
Range	This unit of competency (UoC) covers the abilities to carry out physical and mechanical tests on bituminous paving materials and other constituent materials, aggregate and binder, and analyse test data in testing laboratories.
Level	4
Credit	6 (for reference only)
Competency	<p>Performance Requirements</p> <p>1. Possess knowledge of physical and mechanical tests applicable to asphaltic concrete, bitumen, polymer modified bitumen and aggregate</p> <ul style="list-style-type: none"> • Command the principles and concepts underpinning physical and mechanical tests of bituminous materials. • Employ the principles of test methods for determining physical and mechanical properties of bituminous materials. • Identify the specification requirements of testing bituminous materials. • Explain the principles and operation of equipment used for physical and mechanical tests on bituminous materials. • Specify the calibration requirement of equipment. <p>2. Perform physical and mechanical tests on bituminous materials</p> <ul style="list-style-type: none"> • Identify required sample conditions and check against test requirements. • Apply appropriate test methods/standards and testing equipment for physical and mechanical tests on bituminous material. • Carry out appropriate tests on selected bituminous material according to the requirements of relevant test methods/standards, e.g.: <ul style="list-style-type: none"> • aggregate grading, • bulk specific gravity and theoretical maximum specific gravity, • air void content, • binder content, • penetration resistance, • softening point. • Carry out required calibration checks on testing equipment and conduct validation checks on test data. • Record and analyse test data for reporting. <p>3. Exhibit professionalism</p> <ul style="list-style-type: none"> • Ensure integrity and confidentiality of test data by observing the code of conduct of the laboratory. • Follow established safe work practices and use appropriate personal protective equipment.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • carry out physical and mechanical tests on selected bituminous material by applying appropriate testing equipment according to the requirements of test methods/standards and test specifications, • record and analyse test data by verifying equipment calibration status and checking the validity of test data within the acceptable range specified in test methods/standards.

Unit of Competency

Functional Area: Testing Operations

Title	Perform evaluation tests
Code	105855L5
Range	This unit of competency (UoC) covers the abilities to evaluate results of care performance, fabric performance and colour fastness tests, assess the changes in properties of textile and garment products independently by applying the knowledge of evaluation tests, and critically evaluate test results in testing laboratories.
Level	5
Credit	4 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of evaluation tests <ul style="list-style-type: none"> • Command the principles, methods and equipment for carrying out care performance, colour fastness and/or fabric performance tests. • Command the principles of evaluation to different types of tests, e.g. colour change and colour staining of colour fastness tests, appearance of durable press, seam and crease after repeated home laundering, pilling tests, water repellency test, wrinkle tests, snagging resistance tests. • Describe the methods of evaluation including conditions and environment such as lighting and background for conducting the evaluation. • Identify relevant evaluation standards and specifications, e.g.: <ul style="list-style-type: none"> • international and national standards such as AATCC, ASTM, ISO, EN, DIN, AS/NZS, CAN/CGSB, WOOLMARK, JIS, BS, GB, • manufacturers' and/or clients' specifications. • Specify the verification system including minimum number of raters or assessors and the maximum allowable differences between their assessment results. • Apply the concepts of equipment calibration and traceability to evaluation tests, e.g.: <ul style="list-style-type: none"> • Gray Scale or Chromatic Transference Scale for colour change and colour staining of colour fastness tests, • durable press replicas for appearance of durable press after repeated home laundering, • photographic comparative ratings for single and double needle seams for appearance of seams after repeated home laundering, • photographic comparative ratings for crease retention for appearance of crease after repeated home laundering, • photographic pilling standards for pilling tests, • spray test rating chart for water repellency test, • wrinkle recovery replicas for wrinkle recovery of fabrics. 2. Perform evaluation tests <ul style="list-style-type: none"> • Apply appropriate test methods/standards and environmental conditions for evaluation tests, e.g.: <ul style="list-style-type: none"> • angle and distance between the eye and the specimen for pilling test, • dark environment for wrinkle, crease and seams rating, • angle and dark chamber for colour fastness assessment. • Apply appropriate reference standards for the comparative evaluation. • Carry out evaluation tests independently according to the test methods/standards. • Justify the evaluation results normally in the range of 1 to 5. • Critically evaluate the results with another rater or assessor. • Take corrective actions by exercising appropriate judgement when the difference exceeds the defined criteria. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure all evaluations are carried out in compliance with good laboratory practices under relevant categories of standards. • Ensure integrity and confidentiality of laboratory data and information by implementing the code of conduct as required by the standards and the organisation. • Check colour sensitivity periodically using Munsell Hue test or equivalent.

Unit of Competency

Functional Area: Testing Operations

Assessment Criteria	The integrated outcome requirements of this UoC are the abilities to: <ul style="list-style-type: none">• carry out evaluation tests independently by applying appropriate test and environmental conditions and reference standards according to the requirements of test methods/standards,• verify evaluation results with another rater or assessor,• critically evaluate test results against the relevant specifications of test methods/standards.

Title	Evaluate subcontractor laboratory
Code	105875L5
Range	This unit of competency (UoC) covers the ability to critically evaluate subcontractor laboratory for subcontracting of tests according to relevant international standard and/or accreditation regulation.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of subcontracting of tests <ul style="list-style-type: none"> • Explain conditions and circumstances when the laboratory subcontracts testing work, e.g. workload, need for further expertise, temporary incapacity, permanent subcontracting, franchise arrangements. • Interpret the requirements for subcontracting of tests in relevant international standard and/or laboratory accreditation scheme. • Formulate criteria for selection of competent subcontractor laboratory. • Command interpersonal and communications skills with customers. 2. Evaluate subcontractor laboratory <ul style="list-style-type: none"> • Evaluate whether the subcontractor is competent to perform testing work, e.g. testing activities of the subcontractor laboratory comply with relevant international standard and/or laboratory accreditation scheme. • Critically evaluate non-accredited laboratory to perform subcontracting testing activities. • Advise the customer of the subcontracting arrangement in writing and, when appropriate, gain the approval of the customer. • Take the responsibility for the subcontractor's work. • Maintain a register of all subcontractors for tests and a record of the evidence of compliance with relevant international standard. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the evaluation of subcontractor is effective and efficient.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • critically evaluate the competence of subcontractor laboratory in compliance with relevant international standard and/or laboratory accreditation scheme.
Remark	<p>The relevant international standard and laboratory accreditation scheme involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories • HOKLAS 003 Technical Criteria for Laboratory Accreditation

Unit of Competency**Functional Area: Testing Operations**

Title	Control purchasing of services and supplies
Code	105876L5
Range	This unit of competency (UoC) covers the abilities to select and critically evaluate purchasing of services and supplies that affect the quality of tests in the laboratory according to relevant international standard and/or accreditation regulation.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of purchasing of services and supplies <ul style="list-style-type: none"> • Critically review the test methods and operation of the laboratory to determine reagents, consumables and equipment needed to be purchased. • Establish the stock control requirements of reagents and consumables. • Interpret the requirements for purchasing of services and supplies in relevant international standard and/or laboratory accreditation scheme. • Identify suppliers of critical consumables, supplies and services. • Formulate criteria for selection of suppliers of consumables and services. 2. Control purchasing of services and supplies <ul style="list-style-type: none"> • Select suitable suppliers according to the selection criteria and purchase consumables and services that affect the quality of tests according to the standard operating procedures. • Check the compliance of purchased services and supplies with standard specifications or requirements defined in the test methods and maintain the record of actions taken. • Review and approve for technical content in purchasing documents for items affecting the quality of laboratory output prior to release. • Critically evaluate a broad range of suppliers of consumables, supplies and services which affect the quality of testing and maintain the record of evaluations and list of approved suppliers. • Maintain stock levels of reagents and consumables to ensure smooth operation of the laboratory. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the control of purchasing of services and supplies complies with standard specifications or test method requirements.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • select suitable suppliers for the purchase of services and supplies that affect the quality of tests, • critically evaluate suppliers of consumables, supplies and services and generate the list of approved suppliers.
Remark	<p>The relevant international standard and laboratory accreditation scheme involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories • HOKLAS 003 Technical Criteria for Laboratory Accreditation

Unit of Competency**Functional Area: Testing Operations**

Title	Organise and implement proficiency testing activities
Code	105877L5
Range	This unit of competency (UoC) covers the abilities to devise a plan to participate in proficiency testing programmes or other forms of interlaboratory comparisons for the testing laboratory. This UoC also includes the abilities to organise and implement proficiency testing and/or interlaboratory comparisons for other testing laboratories.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of proficiency testing programmes or interlaboratory comparisons <ul style="list-style-type: none"> • Interpret the requirements of participating and/or organising proficiency testing programmes or interlaboratory comparisons in relevant international standard and laboratory accreditation scheme. • Determine the scope of laboratory testing activities which require the participation in proficiency testing programmes or interlaboratory comparisons. • Employ statistical techniques for evaluation of test results from proficiency testing programmes or interlaboratory comparisons. • Command the concepts and principles of tests seeking for laboratory accreditation. 2. Organise and implement proficiency testing activities <ul style="list-style-type: none"> • Devise an implementation plan for participation in proficiency testing programmes or interlaboratory comparisons to demonstrate the competence of the laboratory in performing tests under its scope of accreditation. • Investigate the root causes for unsatisfactory results and identify the problem. • Implement corrective actions to eliminate the problem and to prevent recurrence. • Monitor the effectiveness of corrective actions taken. • Review, update and justify the plan for participation in proficiency testing programmes or interlaboratory comparisons in response to, e.g.: <ul style="list-style-type: none"> • changes of the scope of accreditation, staffing, methodology, instrumentation and capability, • effectiveness of corrective action taken, • other factors that may affect the quality of laboratory's tests. • Maintain records of participation in proficiency testing activities representative of the accredited testing activities under each test area of the scope of accreditation. • Organise proficiency testing programmes and/or interlaboratory comparisons in compliance with the requirements of relevant international standard. • Use appropriate statistical techniques to evaluate the results of laboratories participating in the proficiency testing programmes or interlaboratory comparisons. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the laboratory participates in proficiency testing programmes or interlaboratory comparisons regularly in accordance with the implementation plan.

Unit of Competency

Functional Area: Testing Operations

<p>Assessment Criteria</p>	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • devise an implementation plan for the laboratory to participate in proficiency testing programmes or interlaboratory comparisons, • organise proficiency testing programmes or interlaboratory comparisons for other laboratories, • critically evaluate the results of proficiency testing programmes or interlaboratory comparisons to justify the competence of the laboratory in performing tests and maintain records of proficiency testing activities.
<p>Remark</p>	<p>The relevant international standard and laboratory accreditation scheme involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17043 Conformity Assessment – General Requirements for Proficiency Testing • HOKLAS 003 Technical Criteria for Laboratory Accreditation • HOKLAS Supplementary Criteria No. 33 Accreditation Regulations Specific for HOKLAS – Laboratory • HOKLAS 017 Technical Criteria for Accrediting Proficiency Testing Providers • HOKLAS Supplementary Criteria No. 34 Accreditation Regulations Specific for HOKLAS – Proficiency Testing Provider

Unit of Competency

Functional Area: Testing Operations

Title	Control laboratory documents and records
Code	105994L5
Range	This unit of competency (UoC) covers the abilities to control and maintain a range of laboratory documents and quality and technical records to be readily retrievable in the laboratory according to relevant international standard and/or accreditation regulation.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of laboratory document control system <ul style="list-style-type: none"> • Interpret the requirements of document control and control of records in relevant international standard and/or laboratory accreditation scheme. • Describe the procedures to control all documents that form part of the management system of the laboratory. • Determine a range of documents to be controlled in the laboratory, e.g. regulations, standards, other normative documents, test and/or calibration methods, drawings, software, specifications, instructions, manuals. • Describe the procedures for identification, collection, indexing, access, filing, storage within defined period, maintenance and disposal of quality records (including internal audit reports, management review reports, records of corrective and preventive actions) and technical records. • Describe the procedures to protect and back-up records stored electronically and to prevent unauthorised access to or amendment of these records. 2. Control laboratory documents and records <ul style="list-style-type: none"> • Authorise editions of appropriate documents and make available at all locations where essential laboratory operations are performed. • Review and, where necessary, revise documents periodically to ensure continuing suitability and compliance with applicable requirements and identify the altered or new text in the document or the appropriate attachments. • Remove invalid or obsolete documents from all points of issue or use. • Identify management system documents generated by the laboratory uniquely, including the date of issue and/or revision identification, page numbering, the total number of pages, the issuing authority(ies). • Store and retain records in a way that they are readily retrievable in the laboratory. • Maintain records of original observations and raw data and provide a traceable link between the test sample or calibration item as received and the report or certificate which is eventually issued. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the controlled documents are reviewed and managed effectively in the laboratory. • Ensure controlled quality and technical records are retained securely and confidentially.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • authorise, review and revise documents to ensure continuing suitability and compliance with applicable requirements, • control and maintain records to provide a traceable link between the test sample or calibration item as received and the report or certificate to be issued.
Remark	<p>The relevant international standard and laboratory accreditation scheme involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories • HOKLAS 003 Technical Criteria for Laboratory Accreditation

Unit of Competency**Functional Area: Testing Operations**

Title	Calibrate and maintain reference standards
Code	105889L4
Range	This unit of competency (UoC) covers the abilities to calibrate reference standards against established acceptance criteria and determine the storage conditions in a testing / calibration laboratory.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of calibrating and storing reference standards <ul style="list-style-type: none"> • Describe the characteristic properties of reference standards. • Select an appropriate calibration technique that the response is stable and sensitivity is large enough for calibration of reference standards. • Select an appropriate control of another reference standard for calibration. • Employ appropriate statistical technique, e.g. student t-test for the evaluation of calibration results. • Apply the concepts of uncertainty to the calibration procedure. 2. Calibrate and maintain reference standards <ul style="list-style-type: none"> • Determine the optimal range of the selected technique. • Perform the calibration of reference standards in accordance with the documented procedures. • Apply appropriate statistical technique to evaluate the calibration results against the pre-established tolerance. • Determine the acceptance of reference standards fit for intended use in the laboratory. • Evaluate the uncertainty of calibration results. • Label reference standards indicating the date of calibration and next calibration date. • Store reference standards in appropriate locations such as dry cabinet, freezer or refrigerator and take measures to maintain their integrity and conditions. 3. Exhibit professionalism <ul style="list-style-type: none"> • Document calibration results and maintain records of calibration of reference standards that meet the requirements of intended application. • Ensure reference standards are calibrated and stored properly.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • calibrate reference standards that meet the requirements of intended use in the laboratory, • evaluate the suitability for use of reference standards against the acceptance criteria.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Verify and maintain reference materials
Code	105890L4
Range	This unit of competency (UoC) covers the abilities to verify the purity of reference materials against established acceptance criteria and determine the storage conditions for maintaining reference materials in a testing / calibration laboratory.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <p>1. Possess knowledge of verification techniques and storage requirements for reference materials</p> <ul style="list-style-type: none"> • Describe the structure of reference materials and their characteristic properties such as UV absorptivity and volatility. • Identify possible impurities in materials under test. • Select an appropriate technique that the response is stable and sensitivity is large in differentiation of minor difference in concentration. • Select a selective detection system, if applicable, to eliminate possible interferences and impurities in the materials under test. • Select an appropriate control material according to the following priority: <ul style="list-style-type: none"> • certified reference material, if available, • reference materials of another brand if certified reference material is not available, • reference materials of another lot only if no other brand is available. • Employ appropriate statistical technique, e.g. student t-test for the evaluation. • Apply the concepts of uncertainty of the verification procedure and uncertainty of purity of materials under test. <p>2. Verify and maintain in-house reference materials</p> <ul style="list-style-type: none"> • Apply the developed verification method and determine the optimal range of the selected technique. • Prepare the concentration for which verification is performed for both the materials under verification and the control materials. • Perform the verification in accordance with the established procedures. • Compare the response to unit mass / concentration of both materials using statistical technique or evaluate the calculated purity of the materials with the claimed one against pre-established tolerance. • Determine the acceptance and suitability of the materials for use as in-house reference materials for routine operation. • Evaluate the uncertainty of purity of the materials under test. • Label in-house reference materials indicating the verification date, next verification date, verified purity and related uncertainty in purity. • Store in-house reference materials in appropriate locations such as dry cabinet, freezer or refrigerator and take measures to prevent cross-contamination with samples and degradation of reference materials. <p>3. Exhibit professionalism</p> <ul style="list-style-type: none"> • Maintain records of verification of in-house reference materials that meet the requirements of intended application. • Ensure in-house reference materials are verified and stored properly. • Differentiate the degradation of reference materials.

Unit of Competency

Functional Area: Testing Operations

Assessment Criteria	The integrated outcome requirements of this UoC are the abilities to: <ul style="list-style-type: none">• select appropriate technique and method for verification of in-house reference materials that best differentiate small difference in concentration and possible impurities,• verify in-house reference materials according to the established verification procedures,• evaluate the suitability for use of in-house reference materials.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Verify and maintain reference and working cultures
Code	105891L4
Range	This unit of competency (UoC) covers the abilities to verify reference and working cultures, specify the criteria of acceptance and storage conditions, and maintain reference and working cultures in a testing laboratory.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess the knowledge of verification procedures and maintenance techniques for reference and working cultures <ul style="list-style-type: none"> • Identify reference cultures of microorganisms not obtained directly from a national collection. • Describe the characteristics of the strains of reference and working cultures to be verified. • Describe various verification techniques for reference and working cultures, e.g.: <ul style="list-style-type: none"> • serological tests, • biochemical tests, • morphological examination. • Select appropriate reference cultures that are traceable to a national culture collection. 2. Verify and maintain reference and working cultures <ul style="list-style-type: none"> • Apply appropriate verification technique according to the characteristics of the strains of reference cultures and the number of sub-culturing passages. • Perform the verification in accordance with the established procedures. • Determine the acceptance criteria of the cultures / sub-cultures for use as reference stocks and working stocks for routine operation in the laboratory. • Record the characteristics of reference and working cultures and compare against the determined acceptance criteria, e.g. microorganisms in reference cultures. • Count the number of passages that a culture stock has gone through. • Label the verified reference and working cultures and sub-cultures indicating the verification date and next verification date. • Maintain desired characteristics of the strains of reference and working cultures by using appropriate storage environment and preservation technique such as freeze-drying, liquid nitrogen storage, beads. 3. Exhibit professionalism <ul style="list-style-type: none"> • Maintain verification records of reference and working cultures and sub-cultures that meet the requirements of intended application. • Ensure reference and working cultures and sub-cultures are verified and maintained properly to avoid any loss of viability, changes of biochemical activity and/or change in morphology.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • apply appropriate verification technique and procedure to verify reference and working cultures within the determined acceptance criteria, • maintain desired characteristics of the strains of reference and working cultures by applying appropriate storage environment and preservation technique.

Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of intended use of equipment and reference standards and requirements of calibration certificates <ul style="list-style-type: none"> • Determine the intended use of equipment and reference standards in the laboratory. • Establish acceptance criteria for the performance of equipment and reference standards after calibration. • Interpret the compliance requirements of calibration certificates in relevant international standards. • Comprehend the principle and mathematical concepts for evaluation of uncertainty for the calibration. 2. Evaluate calibration results of equipment and reference standards <ul style="list-style-type: none"> • Critically evaluate calibration certificates by interpreting: <ul style="list-style-type: none"> • calibration results with units of measurement where appropriate, • calibration methods used, • conditions (e.g. environmental) under which the calibrations are made that have an influence on the measurement results, • uncertainty of measurement and/or a statement of compliance with an identified metrological specification or clauses, • evidence that the measurements are traceable. • Justify the suitability of equipment for intended use based on the interpretation of calibration results against established acceptance criteria and its tendency of performance. • Formulate measures in case calibration exceeds the specified tolerance. • Comprehend and document necessary information in the calibration certificates or results. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the calibration certificate complies with requirements of relevant international standards. • Ensure the necessary information in the calibration certificates or results is updated and the personnel in use of the equipment / reference standards are aware of the information.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • critically evaluate calibration results and justify the suitability of equipment and reference standards for intended use, • comprehend and apply necessary information in the calibration certificates or results.
Remark	<p>The relevant international standards involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories • ISO Guide 31 Reference Materials – Contents of Certificates and Labels • ISO Guide 32 Calibration in Analytical Chemistry and Use of Certified Reference Materials

Unit of Competency

Functional Area: Testing Operations

Title	Select and handle certified reference materials
Code	105888L5
Range	This unit of competency (UoC) covers the abilities to formulate and apply the criteria in the selection and handling of certified reference materials by critically analysing the quality, price, traceability, matrix, concentration range and intended use in a testing / calibration laboratory.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of selecting and handling certified reference materials <ul style="list-style-type: none"> • Determine the intended use of certified reference materials such as verification of trueness of method, construction of calibration curve or use as a quality control sample. • Establish the criteria for selection including: <ul style="list-style-type: none"> • proof of traceability of the materials either demonstrated by accreditation for their production under appropriate international standard for the competence of reference material providers or produced by member of national metrological institution, • appropriate concentration range, matrix and uncertainty that meet the requirements of intended use, • stability, forms (solid, liquid or gas) and package of the materials (package size, storage solvent, storage conditions), • price and delivery time of materials, • certificates in compliance with requirements as stipulated in relevant international standard governing the contents of certificates and labels of reference materials. • Comprehend the nature, characteristics and deterioration of certified reference materials. • Determine the environmental conditions required for handling and storing certified reference materials. 2. Select and handle certified reference materials <ul style="list-style-type: none"> • Select and use the correct class of certified reference materials to match with the appropriate measuring instrument or the purpose of intended use by applying the defined criteria. • Select an approved supplier capable of providing the certified reference materials. • Estimate the amount of certified reference materials required by critically analysing the usage, expiration date of relevant materials and package. • Arrange the purchase of certified reference materials in consultation with relevant personnel. • Evaluate the certificates and assign expiration date as recommended in the certificates. • Handle and store certified reference materials within the work environment in accordance with organisational procedures. • Report and investigate malfunction of or damage to certified reference materials. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure proper selection of certified reference materials that meet the requirements of intended application.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • formulate criteria for selection of certified reference materials that fit the requirements of intended application in terms of matrix, concentration range and traceability, • select and use the correct class of certified reference materials in testing / calibration activities, • handle and store certified reference materials in a safe and metrological sound manner.
Remark	<p>The relevant international standards involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO Guide 31 Reference Materials – Contents of Certificates and Labels • ISO Guide 32 Calibration in Analytical Chemistry and Use of Certified Reference Materials • ISO Guide 33 Uses of Certified Reference Materials • ISO Guide 34 General Requirements for the Competence of Reference Material Producers • ISO Guide 35 Reference Materials – General and Statistical Applications for Certification

Unit of Competency

Functional Area: Testing Operations

Title	Handle and transport equipment
Code	105895L3
Range	This unit of competency (UoC) covers the abilities to handle and transport equipment according to the standard operating procedures within laboratories and/or field sites for carrying out testing / calibration / inspection activities.
Level	3
Credit	1 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge and skills of handling and transporting equipment <ul style="list-style-type: none"> • Describe the characteristics of different types of packing materials. • Identify the transport containers, carriers, materials and accessories required for the equipment. • Describe the procedures for handling and transporting equipment within laboratories and/or field sites. • Specify the precautions for handling and transportation of equipment. 2. Handle and transport equipment in accordance with standard operating procedures and work instructions <ul style="list-style-type: none"> • Handle equipment in accordance with standard operating procedures, work instructions, recommendation of manufacturer and intended use. • Stow equipment in specified transport containers under the required conditions and deliver the equipment to the reception point on time. • Check and complete the required documents at pickup points for chain of custody of the equipment. • Safeguard and protect the equipment from damage during the transport to field site for appropriate activities. • Store equipment in original case, box or designated location when not in use. 3. Exhibit professionalism <ul style="list-style-type: none"> • Maintain the integrity of equipment during handling and transport. • Ensure appropriate and timely transport of equipment required for testing / calibration / inspection activities.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • handle and transport the equipment in a timely manner within laboratories and/or field sites without affecting the performance of equipment and the quality of results, • record details of equipment exchange in chain of custody forms, • safeguard and store the equipment to prevent unintentional damage or lost.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Perform equipment maintenance and performance checks
Code	105894L4
Range	This unit of competency (UoC) covers the abilities to carry out maintenance work and performance checks of equipment used in laboratory / on-site testing activities impartially by applying appropriate procedures and techniques.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of equipment maintenance and performance check techniques <ul style="list-style-type: none"> • Employ the operating principles of major equipment. • Apply the principles of equipment performance check. • Describe maintenance procedures for the major equipment. • Describe the performance check methods for major equipment. • Describe the principles and operation of setting up equipment used for performance checks and maintenance. 2. Perform maintenance and performance checks of equipment <ul style="list-style-type: none"> • Apply appropriate methods, set up the required conditions and accessories for performance or intermediate checks of equipment. • Use suitable equipment, test chamber and test control site, whichever applicable for equipment performance checks. • Set up appropriate environmental conditions for the equipment under check. • Carry out performance checks according to the established procedures. • Identify faulty outcomes of the equipment. • Carry out basic maintenance work for faulty equipment in accordance with standard operating procedures and equipment operating manual. • Record and document equipment performance check results and maintenance work. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure all equipment performance checks and maintenance work are carried out in accordance with good laboratory practices.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • carry out performance checks on equipment impartially by applying appropriate procedures and techniques, • identify faulty equipment by analysing performance check results, • carry out equipment maintenance in accordance with standard operating procedures.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Formulate equipment maintenance plan
Code	105893L5
Range	This unit of competency (UoC) covers the abilities to formulate equipment maintenance and performance check plan for laboratory / on-site testing activities to fulfil the requirements of intended use.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Determine equipment maintenance and performance check requirements and resources availability <ul style="list-style-type: none"> • Develop an alert system in reminding assigned personnel of the equipment maintenance and performance checks schedule. • Evaluate the latest information on manufacturers' specifications, recommendations and international guidelines for performing the equipment maintenance work. • Critically evaluate the level of quality of the personnel, material, equipment and procedures required to deliver the work according to the specifications on equipment maintenance. 2. Formulate equipment maintenance and performance check plan <ul style="list-style-type: none"> • Devise equipment maintenance plans according to the manufacturer's specifications and balance the best use of available resources with skill development opportunities. • Distribute the plans to team or appropriate personnel, explain and confirm contents with them. • Establish measurement criteria of performance check against intended use in consultation with personnel in charge of the equipment. • Monitor the workflow and outputs against plans and investigate any variations. • Revise the maintenance plan appropriately based on the track record of performance checks to achieve the established criteria and balance the effort and the cost. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the system for alerting responsible personnel of the due date of maintenance plan is implemented effectively and efficiently.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • formulate equipment maintenance and performance check plans that fit the intended use without compromising quality, accuracy and traceability, • establish an effective and efficient alerting system to alert responsible personnel in carrying out planned equipment maintenance work, • revise the equipment maintenance plans according to the trend analysis of performance checks.
Remark	

Unit of Competency**Functional Area: Testing Operations**

Title	Authorise test results and reports
Code	105896L5
Range	This unit of competency (UoC) covers the abilities to critically assess the accuracy of data and validity of test results in test reports prior to formally authorising the release of test reports to customer.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of assessing the accuracy of data and validity of test results <ul style="list-style-type: none"> • Command scientific and technical knowledge of the samples, procedures, equipment, materials and instrumentation used to generate test data and results. • Establish expected values for data and results and the uncertainty components for specified test methods. • Describe laboratory procedures for authorising test results and reports. • Specify reporting requirements in test methods, international standards and/or laboratory accreditation schemes. • Apply the concepts of using statistical tests to estimate uncertainties and determine data acceptability, e.g. t-test, F-test, analysis of variance (ANOVA), regression methods. 2. Authorise test results and reports <ul style="list-style-type: none"> • Verify the accuracy of data and technical records by: <ul style="list-style-type: none"> • comparing data with expected values and identifying any outliers, • inspecting data records to check the integrity of data entry, alterations, transfers and calculations, • confirming that technical records provide sufficient information to ensure traceability for the tests involved. • Compare test results with expected values and investigate any significant differences. • Check the reliability of results by examining data or results from repeated tests or duplicate samples. • Assess the significance of any documented observations or typical test conditions or environment and/or sample appearance. • Check that all calculations are free from mistakes and estimates of uncertainty are reasonable and consistent with test method or specification requirements. • Authorise test results and reports in compliance with laboratory procedures. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure that the test reports are verified and checked free from errors prior to issuance. • Maintain the integrity and confidentiality of information in the test reports in compliance with the code of conduct of the laboratory.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • critically verify the accuracy and completeness of data, results and technical records for specified tests, • authorise and issue test results and reports in compliance with laboratory procedures.
Remark	

Unit of Competency

Functional Area: Testing Operations

Title	Investigate complaints and appeals on testing services
Code	105897L5
Range	This unit of competency (UoC) covers the abilities to investigate complaints and appeals on test reports or results by critically analysing suspicious test results and rectifying test reports in a testing laboratory.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge and skills of handling complaints and appeals <ul style="list-style-type: none"> • Explain technical details of sampling, test methods and test results. • Establish expected values for data and results. • Command effective problem solving techniques and cause analysis skills appropriate to test methods. • Describe procedures relating to customer service and communication protocols. 2. Investigate complaints and appeals on testing services <ul style="list-style-type: none"> • Determine the validity of complaints and appeals. • Examine records of performance checks and calibration critically to ensure that the equipment used meet test specifications and requirements. • Examine whether human and/or environmental factors could have effects on the reliability of results. • Evaluate sources of interferences that may have occurred during measurements. • Retrieve stored samples and examine whether they are contaminated or deteriorated. • Verify whether sampling procedures could contribute to unexpected results. • Perform control tests using the new or same samples to check unexpected results. • Investigate possible root causes of unexpected results and the preventive/corrective actions undertaken. • Report investigation outcomes and recommendations for improvements in accordance with laboratory procedures. • Explain investigation outcomes and confidence level for unexpected test results to the complainant / appellant clearly by appropriate communication means. 3. Exhibit professionalism <ul style="list-style-type: none"> • Demonstrate a professional approach and positive organisation image by maintaining independence and an ability to resist improper influences. • Maintain the confidentiality of complainant's information in compliance with the code of conduct of the laboratory.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • investigate complaints and appeals by critically analysing unexpected test results in a logical and efficient manner, • explain investigation outcomes to the complainant / appellant clearly using appropriate communication means.

**Units of Competency for Laboratory /
On-site Testing - Testing Quality
Management**

Unit of Competency

Functional Area: Testing Quality Management

Title	Formulate laboratory quality management system
Code	105898L6
Range	This unit of competency (UoC) covers the abilities to formulate and design a quality management system in a testing / calibration laboratory according to its operational needs by interpreting the requirements in relevant international standards and laboratory accreditation scheme.
Level	6
Credit	6 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of laboratory quality management system <ul style="list-style-type: none"> • Determine the scope of activities of the laboratory. • Analyse a broad range of resources requirements and their availabilities in the laboratory. • Interpret the requirements of laboratory quality management system in relevant international standards for testing / calibration laboratories. • Interpret the requirements of laboratory quality management system in relevant laboratory accreditation scheme. 2. Formulate laboratory quality management system <ul style="list-style-type: none"> • Plan and design a quality management system to match with the scope of activities carried out by the laboratory in the following aspects: <ul style="list-style-type: none"> • document control, • review of requests, tenders and contracts, • subcontracting of tests and calibrations, • purchasing services and supplies, • service to customer and complaints handling, • control of nonconforming work, • improvement, • corrective action and preventive action, • control of records, • internal audits, • management reviews, • personnel, • accommodation and environmental conditions, • test and calibration methods and method validation, • equipment, • measurement traceability, • sampling, • handling of test / calibration items, • assuring the quality of test / calibration results, • reporting the results. • Develop the plan and procedures for implementing quality management system in the laboratory, including the following components: <ul style="list-style-type: none"> • objectives and tasks, • responsibilities of personnel, • timeline, • budget and resource needs, • benchmarks or performance indicators. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the quality management system is fit for the purpose and complies with the size and scope of the laboratory. • Ensure the quality management system plan should be made available to all laboratory staff for its implementation.

Unit of Competency

Functional Area: Testing Quality Management

Assessment Criteria	The integrated outcome requirements of this UoC are the abilities to: <ul style="list-style-type: none">• formulate the quality management system for a laboratory by critically interpreting the requirements in relevant international standards and laboratory accreditation scheme,• develop the plan and procedures for implementing the quality management system by determining the scope of activities of the laboratory in compliance with the organisation policy on quality management.
Remark	The relevant international standards and laboratory accreditation scheme involved in this UoC are as follows: <ul style="list-style-type: none">• ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories• HOKLAS 003 Technical Criteria for Laboratory Accreditation

Unit of Competency**Functional Area: Testing Quality Management**

Title	Implement laboratory quality management system
Code	105899L5
Range	This unit of competency (UoC) covers the abilities to implement quality management system in a testing / calibration laboratory in compliance with the formulated quality management system and procedures.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of quality management system and its implementation requirements <ul style="list-style-type: none"> • Employ the concepts of continuous improvement processes. • Explain the formulated implementation plan of laboratory quality management system. • Identify the objectives of laboratory quality management system. • Determine resource requirements in the implementation process. • Examine the training needs of laboratory personnel responsible for the implementation of quality management system. 2. Implement laboratory quality management system <ul style="list-style-type: none"> • Establish and follow the timeline for tasks to be performed with projected completion dates. • Secure necessary resources which are in place and available for implementation of laboratory quality management system, e.g.: <ul style="list-style-type: none"> • all financial requirements, • personnel needs such as number of staff required, training need of staff, • facilities, equipment, supplies of materials, reference standards. • Adjust the implementation plan according to resource implications and communicate effectively with laboratory personnel involved in the implementation processes. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the laboratory quality management system is implemented in compliance with the established plan and defined objectives.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • implement quality management system in the laboratory by establishing the timeline for tasks to be performed in compliance with the defined objectives, • adjust the implementation plan by exercising appropriate judgement on resource implications.
Remark	

Unit of Competency

Functional Area: Testing Quality Management

Title	Monitor and review implementation of laboratory quality management system
Code	105900L6
Range	This unit of competency (UoC) covers the abilities to continuously monitor and critically review the implementation of quality management system in a testing / calibration laboratory and recommend appropriate improvement measures for the quality management system by evaluating the performance outcomes of the laboratory.
Level	6
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of the objectives of laboratory quality management system and key performance indicators of the management system <ul style="list-style-type: none"> • Define the objectives of laboratory quality management system. • Establish the key performance indicators of implementing the laboratory quality management system. • Examine a broad range of quality documentation, including records of improvement plans and initiatives. • Analyse roles, duties and current competencies of relevant personnel involved in laboratory operations. 2. Monitor and review implementation of laboratory quality management system <ul style="list-style-type: none"> • Review and revise, where necessary, quality manuals and work instructions for the workplace. • Critically review performance outcomes and evaluate the implementation of quality management system and its operations. • Recommend improvement measures for the quality management system in accordance with own level of responsibility and workplace procedures. • Initiate and monitor training and skill development programmes for personnel in relation to quality system and continuous improvement. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the quality management system is monitored and reviewed regularly and effectively for continuous improvement of the laboratory.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • monitor and critically review the implementation of quality management system for testing/ calibration activities within the work area, • recommend improvement measures and initiate quality processes to enhance the performance of individuals and teams in the work area.
Remark	

Unit of Competency**Functional Area: Testing Quality Management**

Title	Manage and handle nonconforming testing work
Code	105901L6
Range	This unit of competency (UoC) covers the abilities to investigate nonconforming testing work or departures from the policies and procedures in the laboratory management system and/or technical operations by evaluating the evidence collected in a testing laboratory, and recommend improvement measures to manage the nonconformities.
Level	6
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> Possess knowledge of technical aspects of testing procedures and documents of management system <ul style="list-style-type: none"> Command the concepts of test methods and apply testing and quality control procedures. Comprehend the quality manual and a broad range of documents relevant to laboratory management system. Devise suitable approach and procedures to identify and investigate nonconforming testing work and test reports. Interpret the requirements for control of nonconforming testing work and test reports in relevant international standard and laboratory accreditation requirements. Manage and handle nonconforming testing work <ul style="list-style-type: none"> Identify and investigate nonconforming testing work or departures from the policies and procedures in the laboratory management system and/or technical operations through a variety of activities, e.g.: <ul style="list-style-type: none"> internal or external audits, management reviews, feedback / complaints from customers, staff observations / suggestions. Critically evaluate the significance of nonconforming testing work and the impact of nonconforming test reports. Recommend appropriate measures for continuous improvement of the laboratory. Establish a mechanism to recall nonconforming test reports that have been issued. Establish policy and procedures for implementing corrective actions to eliminate identified nonconformities. Exhibit professionalism <ul style="list-style-type: none"> Collect sufficient evidence and analyse all necessary data / documents / records to identify and investigate nonconforming testing work and test reports.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> investigate nonconformities in laboratory management system and/or technical operations by applying suitable approach and procedures, critically evaluate the significance of nonconformities and impact of nonconforming test reports, recommend improvement measures and corrective actions to eliminate identified nonconformities in the laboratory.
Remark	<p>The relevant international standard and laboratory accreditation scheme involved in this UoC are as follows:</p> <ul style="list-style-type: none"> ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories HOKLAS 003 Technical Criteria for Laboratory Accreditation

Unit of Competency

Functional Area: Testing Quality Management

Title	Conduct management review of laboratory
Code	105902L5
Range	This unit of competency (UoC) covers the abilities to establish the schedule and procedures for the laboratory's top management to conduct a review of the laboratory management system to ensure its continuing suitability and effectiveness and to induce any necessary changes or improvements.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of reviewing management system of a laboratory <ul style="list-style-type: none"> • Determine the scope and detailed requirements of reviewing management system of a laboratory. • Explain the details in all aspects of quality management system of a laboratory. • Interpret the requirements of management system in relevant international standard and define the performance indicators of the management system. 2. Conduct management review of a testing / calibration laboratory <ul style="list-style-type: none"> • Establish procedures to review the management system of a testing / calibration laboratory at planned regular intervals by taking into account of the following: <ul style="list-style-type: none"> • the suitability of policies and procedures, • reports from managerial and supervisory personnel, • the outcome of recent internal audit, • corrective and preventive actions, • assessments by external bodies, • the results of inter-laboratory comparisons or proficiency tests, • customer feedback, • appeals and complaints, • recommendations for improvement, • other relevant factors, such as quality control activities, resources and staff training. • Critically evaluate findings from the review of: <ul style="list-style-type: none"> • measurable quality objectives such as customer survey and outside services and supplies, • accommodation, • capacities and workload, • personnel, • future development. • Maintain accurate records of management review. • Generate an action plan to improve the laboratory management system. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the management review is conducted timely and effectively to enhance the quality management system of the laboratory.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • plan and conduct management review of the laboratory according to predetermined schedule and procedures, • evaluate review findings critically to ensure the continuing suitability and effectiveness of the laboratory management system, • generate an action plan to improve the management system.
Remark	<p>The relevant international standard involved in this UoC is as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories

Unit of Competency**Functional Area: Testing Quality Management**

Title	Conduct internal audit of laboratory quality system
Code	105903L5
Range	This unit of competency (UoC) covers the abilities to prepare for, carry out and document an internal audit of aspects of the quality system of a testing laboratory. It also covers the abilities to critically analyse audit findings to develop an action plan for implementing the identified corrective actions for continuous improvement.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of conducting an internal audit <ul style="list-style-type: none"> • Determine the scope of internal audit and evaluate detailed requirements of the planned audit. • Identify procedures and/or the work area to be audited, and collect relevant documentation. • Allocate roles and responsibilities of personnel in internal audit team. • Explain the audit process and develop a detailed audit plan in consultation with relevant personnel. • Develop an audit checklist to identify conformance and non-conformance. • Apply the concept of horizontal, vertical and witness audits in conducting internal audit. 2. Conduct internal audit and report findings <ul style="list-style-type: none"> • Determine the components of the quality system and work area to be audited. • Collaborate with relevant personnel to maximise continuous improvement and ownership of the audit process. • Collect sufficient evidence to identify non-conforming aspects of the quality system. • Compile findings from the audit processes in the required format. • Maintain accurate records of internal audit. • Analyse nonconformities critically to investigate the root causes. • Propose corrective actions for identified nonconformities. • Suggest strategies and procedures for the implementation and monitoring of the corrective actions. • Generate an action plan for the implementation of corrective actions and monitoring of their effectiveness to improve the quality system. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the internal audit of laboratory quality system is conducted timely and effectively.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • conduct an internal audit of the laboratory quality system according to the audit plan by determining the scope and detailed requirements of the internal audit, • collect and analyse all necessary data/documentation/records to investigate nonconformities and their root causes, • generate an action plan to implement and monitor the corrective actions for continuous improvement of the laboratory quality system.
Remark	<p>The relevant international standards involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17025 General Requirements for the Competence of Testing and Calibration Laboratories • ISO 9001 Quality Management Systems • ISO 19011 Guidelines for Auditing Management Systems

Unit of Competency

Functional Area: Testing Quality Management

Title	Implement corrective actions for testing services
Code	105904L4
Range	This unit of competency (UoC) covers the abilities to identify root causes of detected nonconformities in a testing laboratory and implement appropriate corrective actions to eliminate the causes.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of identifying root cause of detected nonconformity in the laboratory <ul style="list-style-type: none"> • Examine the nonconformities detected in the laboratory. • Identify and investigate the root causes of nonconformities. 2. Implement corrective actions for testing services <ul style="list-style-type: none"> • Implement appropriate corrective actions to eliminate identified nonconformities. • Consult with relevant personnel regarding the necessary strategies to improve the laboratory operations and quality system. • Report the effectiveness of the corrective actions after an agreed time interval. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the corrective actions are effective to handle detected nonconformities in the laboratory.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • identify the root causes of nonconformities detected in the laboratory technical operations and quality system, • implement corrective actions to eliminate identified nonconformities.
Remark	

Unit of Competency

Functional Area: Testing Quality Management

Title	Implement preventive actions for testing services
Code	105905L4
Range	This unit of competency (UoC) covers the abilities to identify the potential sources of nonconformities in technical operations and management system of a testing laboratory and implement appropriate preventive actions for continuous improvement.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of identifying potential sources of nonconformities in the laboratory <ul style="list-style-type: none"> • Employ scientific and technical knowledge underpinning the processes, procedures, equipment and instrumentation associated with the individual's work tasks and duties. • Describe the operating procedures associated with the individual's regular technical duties. • Identify the role of laboratory services to the organisation and customers. • Identify potential sources of nonconformities in laboratory technical operations and management system by, e.g.: <ul style="list-style-type: none"> • analysis of test and quality control data, • review of standard operating procedures, • trend and risk analysis, • proficiency test results. 2. Implement preventive actions for testing services <ul style="list-style-type: none"> • Implement preventive actions according to the identified potential sources of nonconformities. • Monitor and report the effectiveness of preventive actions based on: <ul style="list-style-type: none"> • the extent of preventive actions, • the likelihood of the occurrence of nonconformities, • the consequence of the potential nonconformities. • Identify and report opportunities for continual improvements in procedures, processes and equipment in work area. • Recommend improvement actions and monitor their implementation and effectiveness to eliminate possible causes for sub-optimal performance. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the preventive actions are effective to handle potential nonconformities in the laboratory.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • identify potential nonconformities in laboratory technical operations and management system, • implement preventive actions to eliminate the likelihood of the occurrence of nonconformities in the laboratory.
Remark	

Units of Competency for Inspection - Inspection Operations

Unit of Competency**Functional Area: Inspection Operations**

Title	Prepare work documents for conducting inspection
Code	105914L3
Range	This unit of competency (UoC) covers the abilities to prepare work documents and instructions for conducting inspection in accordance with standard operating procedures of the inspection body.
Level	3
Credit	1 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of work documents required for conducting inspection <ul style="list-style-type: none"> • Describe the inspection procedures such as planning, sampling, testing results recording. • Identify the specifications of product / process to be inspected and the production system such as significant factors, control points. • Identify the content or type of information to be collected during the inspection. • Collect and review the information relevant to inspection activities and work document preparation for recoding inspection results. • Describe the documentation and record system of the inspection body. 2. Prepare work documents for conducting inspection <ul style="list-style-type: none"> • Identify the scope and requirements of the work documents and instructions. • Assign unique identification of work documents. • Follow documentation format to prepare documents by taking into consideration of selected inspection method, equipment and apparatus used, qualified personnel, sampling and testing requirements, acceptance criteria of inspection and professional judgement. • Control work documents to keep them up-to-date and available to the relevant personnel. • Maintain work documents to ensure their functionality for inspection 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure work documents are appropriate and fit for intended use.
Assessment Criteria	The integrated outcome requirement of this UoC is the ability to: <ul style="list-style-type: none"> • prepare work documents fit for practical use in conducting inspection efficiently.

Unit of Competency

Functional Area: Certification Quality Management

Title	Evaluate subcontractor of certification activities
Code	105950L5
Range	This unit of competency (UoC) covers the abilities to critically evaluate subcontractor of certification activities to ensure the audit quality and conformity to the relevant standards.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of outsourcing and subcontracting strategy of the certification body <ul style="list-style-type: none"> • Interpret the outsourcing strategy by considering all related factors and its follow up activities for subsequent implementation / operation of the strategy. • Define the work of scope provided by / subcontracting to the outsourcing entity. • Formulate guidelines for the selection, qualification and monitoring of the outsourcing entity including documentation procedure of maintaining all related records to demonstrate the competency and impartiality, e.g. training records and resume demonstrating working experience, evaluation records. 2. Evaluate subcontractor of certification activities <ul style="list-style-type: none"> • Analyse the conditions under which outsourcing may take place. • Critically evaluate the competence, impartiality and confidentiality of the outsourcing entity to perform the outsourced services. • Provide appropriate training tools and means to the outsourcing entity and information related to their services provided, including the accreditation and standard requirements. • Monitor the quality of all entities that provided outsourced services used for certification activities in conformance with relevant standard. • Maintain records of competence of outsourcing entities, including auditors and technical experts. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the outsourced entities conform to the requirements of the certification body and also to relevant international standards.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • critically evaluate the competence, impartiality and confidentiality of the outsourcing entity to perform the outsourced certification services in accordance with the strategy of the certification body, • take responsibility for all activities outsourced to subcontractor by monitoring the quality of its work and outputs.
Remark	<p>The relevant international standards and accreditation scheme involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17021 Conformity Assessment – Requirements for Bodies Providing Audit and Certification of Management Systems • ISO/IEC 17065 Conformity Assessment – Requirements for Bodies Certifying Products, Processes and Services • HKCAS 003 Technical Criteria for Accreditation of Management System Certification Bodies • HKCAS 023 Technical Criteria for Accreditation of Product Certification Bodies

Unit of Competency**Functional Area: Certification Quality Management**

Title	Conduct management review on certification services
Code	105953L5
Range	This unit of competency (UoC) covers the abilities to review the management system of the certification body at planned intervals to ensure its continuing suitability, adequacy and effectiveness in accordance with relevant international standards and the quality management system of the certification body.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of management system of the certification body and its review requirements <ul style="list-style-type: none"> • Determine the scope and detailed requirements of reviewing management system of the certification body. • Determine scheme(s) / product(s) to be covered in the periodical management review. • Specify the requirements of management system in relevant international standards. • Propose the agenda and review interval of the management review. 2. Conduct management review of the certification body <ul style="list-style-type: none"> • Collect a range of related information for the management review, e.g.: <ul style="list-style-type: none"> • results of internal and external audits, • feedback from clients and interested parties, • feedback from the committee for safeguarding impartiality, • the status of preventive and corrective actions, • follow-up actions from previous management reviews, • the fulfilment of objectives, • changes that could affect the management system, • appeals and complaints. • Critically analyse collected information and recommend decisions and actions related to: <ul style="list-style-type: none"> • improvement of the effectiveness of the management system and its processes, • improvement of the certification services related to the fulfilment of relevant international standards, • resource needs. • Retain all records of the management review inputs and outputs, including the follow up actions. • Allocate required resources for improvement plan / action proposed in the management review. • Monitor and report progress of the follow up actions. 3. Exhibit professionalism <ul style="list-style-type: none"> • Demonstrate good analytical power to review the performance of the management system. • Strive for continual improvement by identifying improvement opportunities.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • conduct management review in a timely and regular manner in accordance with the quality management system, • monitor and evaluate progress of review outputs to ensure the continuing suitability, adequacy and effectiveness of the certification body.
Remark	<p>The relevant international standards involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17021 Conformity Assessment – Requirements for Bodies Providing Audit and Certification of Management Systems • ISO 9001 Quality Management Systems • International Accreditation Forum (IAF) Mandatory Documents (MDs)

Unit of Competency

Functional Area: Certification Quality Management

Title	Conduct internal audit of certification services
Code	105954L5
Range	This unit of competency (UoC) covers the abilities to conduct an internal audit of the quality system of a certification body and generate audit findings.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of conducting an internal audit in the certification body <ul style="list-style-type: none"> • Determine the scope and detailed requirements of the internal audit. • Establish procedures for conducting internal audit to verify the fulfilment of relevant international standards and accreditation requirements, as well as the internal guideline and scheme specification. • Devise audit programme and audit plan which takes into consideration of the importance of the process and areas to be audited, as well as the results of previous audits. • Allocate audit resources with knowledge of certification, auditing and requirements of the applied international standards. • Develop audit checklist and auditing documents for collection of objective evidence within scope. • Apply the concept of horizontal, vertical and witness audits in conducting internal audit. 2. Conduct internal audit in the certification body <ul style="list-style-type: none"> • Examine product(s) / scheme(s) to be included in the audit programme and apply the sample methodology, including the sampling method to be deployed. • Collect and evaluate objective and supporting evidence to generate audit findings summarising conformities and detailing nonconformities. • Collaborate with relevant personnel to maximise continuous improvement and ownership of improvement. • Maintain audit documents and accurate records as per the defined retention policy. • Document findings from the audit process in the required format. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the internal audit is conducted timely and effectively. • Demonstrate unbiased judgement and impartiality with good communication skill and strong analytical power.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • conduct the internal audit to collect objective and supporting evidence, • generate, present and document audit findings summarising conformities and detailing nonconformities.
Remark	<p>The relevant international standards involved in this UoC are as follows:</p> <ul style="list-style-type: none"> • ISO/IEC 17021 Conformity Assessment – Requirements for Bodies Providing Audit and Certification of Management Systems • ISO 9001 Quality Management Systems • ISO 19011 Guidelines for Auditing Management Systems • International Accreditation Forum (IAF) Mandatory Documents (MDs)

Unit of Competency

Functional Area: Certification Quality Management

Title	Implement corrective actions and preventive actions for certification services
Code	105955L4
Range	This unit of competency (UoC) covers the abilities to identify operational and potential nonconformities in the operation of the certification body and implement appropriate corrective actions and preventive actions to eliminate the causes of nonconformities.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of operational and potential nonconformities in the certification body <ul style="list-style-type: none"> • Determine the causes of operational nonconformities, e.g. <ul style="list-style-type: none"> • violation of accreditation requirements, • customer complaints, • identified from internal audits, • trend analysis on quality performance indicators. • Define the method applied in evaluation of the need for corrective action and preventive action, e.g. risk analysis approach or failure mode and effect analysis. • Describe the handling process of the corrective and preventive actions, including root cause analysis, correction and corrective action applied, result of the action taken, review of effectiveness, preventive action applied. • Describe roles and responsibilities for the identification, evaluation, implementation and review of corrective actions and preventive actions. 2. Implement corrective actions and preventive actions for certification services <ul style="list-style-type: none"> • Implement corrective actions needed to prevent recurrence of identified nonconformities in a timely manner according to the established action plan. • Implement preventive actions needed to prevent the occurrence of potential nonconformities. • Record the results of actions taken. • Review the effectiveness of the corrective actions and preventive actions taken. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the performance of the actions deployed in all relevant parts of the certification body is evaluated in a timely manner.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • identify the causes of operational and potential nonconformities in the operation of the certification body, • implement corrective actions and preventive actions according to the established action plans, • review the effectiveness of actions taken to eliminate the recurrence of operational nonconformities and occurrence of potential nonconformities.

Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of staff training and people development <ul style="list-style-type: none"> • Describe the organisational structure and explain the function of each department. • Interpret the skills and competency requirements of each post related to TIC operations in the organisation. • Explain the essential components of human resources management, e.g.: <ul style="list-style-type: none"> • recruitment, • training, • remuneration, • benefits, • labour legislations. • Evaluate the professional accreditation of the TIC industry from the government / professional organisations. • Examine the skill upgrading training programmes accredited by the government / training institutions. • Specify the recognised qualifications and training requirements of the TIC organisation. • Analyse the functions and characteristics of the services of the organisation. 2. Formulate staff training and people development plan <ul style="list-style-type: none"> • Evaluate the work performance of the current staff according to the job requirements of different departments. • Analyse the difference between the ability and the expected competency of the current staff to establish necessary training needs for selected staff with priorities. • Critically assess the requirements of manpower and skills in the foreseeable future according to the trend of development of the TIC industry. • Formulate staff training programmes according to the internal successor / promotion plans of the organisation. • Select appropriate training methods according to the special requirements of different departments, internal training capacity and the supply of the training market. • Provide adequate training resources to meet the development needs of staff. • Evaluate the effectiveness of staff training programmes so that the staff can obtain the expected skills and knowledge through the training. • Review the effectiveness of staff training system and policy of the organisation regularly. • Put forward suggestions for improvement of the staff training and people development plan. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the training and development plan can help to improve the quality of the staff, and meet the need of the organisation and the developmental trend of the TIC industry.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • formulate staff training and people development plan in accordance with the objective of development and resources of the organisation.
Remark	

Unit of Competency

Functional Area: Operations Management

Title	Interact and exchange information with customers
Code	105985L3
Range	This unit of competency (UoC) covers the ability to interact and exchange information with customers according to the guidelines of the TIC organisation.
Level	3
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of interacting and exchanging information with customers <ul style="list-style-type: none"> • Describe customer relationships and the importance of customer service. • Determine customers' needs and requests. • Describe the procedures of customer service of the organisation. • Master the interpersonal skills. • Describe the functions and characteristics of the services. 2. Interact and exchange information with customers <ul style="list-style-type: none"> • Identify the importance of interacting and exchanging information with customers. • Select suitable and effective communication channels, e.g.: <ul style="list-style-type: none"> • meeting, • visit, • interview, • customer hotline, • e-mail, • customer feedback form, • fax. • Provide and exchange information about the services effectively. • Interact with customers and give advice and guidance in technical matters. • Maintain communication with the customers throughout the work, especially in large assignments. • Collect and classify information from the customers in appropriate circumstances according to the guidelines of the organisation. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure accurate information is provided to the customers.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • interact and exchange information with customers by using appropriate communication and interpersonal skills to gain customers' trust and build up good relationship.
Remark	

Unit of Competency

Functional Area: Operations Management

Title	Follow up feedback from customers
Code	105984L4
Range	This unit of competency (UoC) covers the abilities to follow up feedback from customers according to the policies and procedures of the TIC organisation, and comprehend and respond to customers' opinions properly.
Level	4
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of following up feedback from customers and providing proper response <ul style="list-style-type: none"> • Explain the importance of customers' feedback to the development of the organisation. • Describe the relationship between customers and the organisation. • Determine the types of feedback channels, e.g.: <ul style="list-style-type: none"> • customer satisfaction surveys, • review of test or calibration reports with customers. • Describe the policies and procedures to follow up customers' feedback and provide response to customers. 2. Follow up feedback from customers <ul style="list-style-type: none"> • Obtain feedback, both positive and negative, from the customers by: <ul style="list-style-type: none"> • listening to customers' concerns, queries, questions or objections attentively and respect their rights to express opposite opinions, • revising service recommendation according to the needs and concerns of the customers, • encouraging customers to give feedback. • Handle and follow up customers' feedback, e.g.: <ul style="list-style-type: none"> • adopt the policies and procedures of the organisation for dealing with customers' feedback, • describe the background and behaviour of the customers, • use appropriate methods of communication and response, • investigate and follow up the case, • maintain and strengthen customer relationship, • analyse customers' requirements for service quality • Analyse the feedback to improve the management system, testing and calibration / inspection / certification activities and customer service. • Establish the database of customer feedback. 3. Exhibit professionalism <ul style="list-style-type: none"> • Follow up feedback from customers and respond to them in a timely and efficient manner to increase customer satisfaction. • Protect customer privacy and confidentiality.
Assessment Criteria	<p>The integrated outcome requirement of this UoC is the ability to:</p> <ul style="list-style-type: none"> • follow up feedback from customer and respond to customer's opinion according to the policies and procedures of the organisation in a timely and efficient manner.
Remark	

Unit of Competency**Functional Area: Operations Management**

Title	Handle and resolve customer service problems
Code	105983L5
Range	This unit of competency (UoC) covers the abilities to critically evaluate the customer service problems and justify the best solution to resolve customer service problems in compliance with the customer service policies of the TIC organisation.
Level	5
Credit	2 (for reference only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Possess knowledge of customer service policies <ul style="list-style-type: none"> • Explain the importance of good customer relationship. • Describe the policies and procedures of the organisation for dealing with customer service problems. • Analyse the rights of the customers. • Master the skills to build up good customer relationship, e.g.: <ul style="list-style-type: none"> • good personal image, • good communication skills, • the satisfaction of the customers, • the ability to deal with difficult customers. • Evaluate common customer services problems in TIC industry, e.g.: <ul style="list-style-type: none"> • problems about the testing and/or calibration procedures, inspection procedures, or auditing processes • delays or deviations in the performance of the tests and/or calibrations, inspection or certification, • problems caused by lack of resources or human error. 2. Handle and resolve customer service problems <ul style="list-style-type: none"> • Examine and evaluate the problems of the customers. • Propose various solutions for the problems and justify the best solution for the customer and the organisation to resolve customer service problems. • Discuss the solution with the customer and implement the solution. • Inform the customer about the progress of resolving the problems. • Report the problems and resolution to senior management. • Maintain records of the problems and the actions taken. • Review the performance of customer service, avoid the same problems to occur again and improve the quality of customer service. 3. Exhibit professionalism <ul style="list-style-type: none"> • Ensure the customer service problems are resolved to the customers' satisfaction.
Assessment Criteria	<p>The integrated outcome requirements of this UoC are the abilities to:</p> <ul style="list-style-type: none"> • critically evaluate customer service problems, • justify and select the best solution to resolve the customer service problems to achieve the customer's satisfaction.
Remark	

Generic Level Descriptors

Level	Knowledge & Intellectual Skills	Processes	Application, Autonomy & Accountability	Communications, IT & Numeracy
1	<ul style="list-style-type: none"> - Employ recall and demonstrate elementary comprehension in a narrow range of areas with dependency on ideas of others - Exercise basic skills - Receive and pass on information - Use, under supervision or prompting, basic tools and materials. - Apply learnt responses to solve problems - Operate in familiar, personal and/or everyday contexts - Take some account, with prompting, of identified consequences of actions. 	<ul style="list-style-type: none"> - Operate mainly in closely defined and highly structured contexts - Carry out processes that are repetitive and predictable - Undertake the performance of clearly defined tasks - Assume a strictly limited range of roles. 	<ul style="list-style-type: none"> - The ability to perform tasks of routine and repetitive nature given clear direction - Carry out directed activity under close supervision - Rely entirely on external monitoring of output and quality 	<ul style="list-style-type: none"> - Use very simple skills with assistance — for example: - Take some part in discussions about straightforward subjects - Read and identify the main points and ideas from documents about straightforward subjects - Produce and respond to a limited range of simple, written and oral communications, in familiar/routine contexts - Carry out a limited range of simple tasks to process data and access information - Use a limited range of very simple and familiar numerical and pictorial data - Carry out calculations, using whole numbers and simple decimals to given levels of accuracy.

Generic Level Descriptors

Level	Knowledge & Intellectual Skills	Processes	Application, Autonomy & Accountability	Communications, IT & Numeracy
2	<ul style="list-style-type: none"> - Apply knowledge based on an underpinning comprehension in a selected number of areas - Make comparisons with some valuation and interpret available information - Apply basic tools and materials and use rehearsed stages for solving problems. - Operate in familiar, personal and/or everyday contexts - Take account the identified consequences of actions. 	<ul style="list-style-type: none"> - Choose from a range of procedures performed in a number of contexts, a few of which may be non-routine - Co-ordinate with others to achieve common goals. 	<ul style="list-style-type: none"> - The ability to perform a range of tasks in predictable and structured contexts - Undertake directed activity with a degree of autonomy - Achieve outcomes within time constraints - Accept defined responsibility for quantity and quality of output subject to external quality checking. 	<ul style="list-style-type: none"> - Use skills with some assistance —for example: - Take active part in discussions about identified subjects - Identify the main points and ideas from documents and reproduce them in other contexts - Produce and respond to a specified range of written and oral communications, in familiar/routine contexts - Carry out a defined range of tasks to process data and access information - Use a limited range of familiar numerical and graphical data in everyday contexts - Carry out calculations, using percentages and graphical data to given levels of accuracy.

Generic Level Descriptors

Level	Knowledge & Intellectual Skills	Processes	Application, Autonomy & Accountability	Communications, IT & Numeracy
3	<ul style="list-style-type: none"> - Apply knowledge and skills in arrange of activities, demonstrating comprehension of relevant theories - Access, organize and evaluate information independently and make reasoned judgements in relation to a subject or discipline - Employ a range of responses to well defined, but sometimes unfamiliar or unpredictable, problems - Make generalizations and predictions in familiar contexts. 	<ul style="list-style-type: none"> - Operate in a variety of familiar and some unfamiliar contexts, using a known range of technical or learning skills - Select from a considerable choice of predetermined procedures - Give presentations to an audience 	<ul style="list-style-type: none"> - The ability to perform tasks in a broad range of predictable and structured contexts which may also involve some non-routine activities requiring a degree of individual responsibility - Engage in self-directed activity with guidance/evaluation - Accept responsibility for quantity and quality of output - Accept well defined but limited responsibility for the quantity and quality of the output of others 	<ul style="list-style-type: none"> - Use a wide range of largely routine and well practiced skills — for example: - Produce and respond to detailed and complex written and oral communication in familiar contexts, and use a suitable structure and style when writing extended documents. - Select and use standard applications to obtain, process and combine information - Use a wide range of numerical and graphical data in routine contexts, which may have some non-routine elements.

Generic Level Descriptors

Level	Knowledge & Intellectual Skills	Processes	Application, Autonomy & Accountability	Communications, IT & Numeracy
4	<ul style="list-style-type: none"> - Develop a rigorous approach to the acquisition of a broad knowledge base, with some specialist knowledge in selected areas - Present and evaluate information, using it to plan and develop investigative strategies - Deal with well defined issues within largely familiar contexts, but extend this to some unfamiliar problems - Employ a range of specialised skills and approaches to generate a range of responses. 	<ul style="list-style-type: none"> - Operate in a range of varied and specific contexts involving some creative and non-routine activities - Exercise appropriate judgement in planning, selecting or presenting information, methods or resources - Carry out routine lines of enquiry, development of investigation into professional level issues and problems. 	<ul style="list-style-type: none"> - The ability to perform skilled tasks requiring some discretion and judgement, and undertake a supervisory role - Undertake self-directed and a some directive activity - Operate within broad general guidelines or functions - Take responsibility for the nature and quantity of own outputs - Meet specified quality standards - Accept some responsibility for the quantity and quality of the output of others. 	<ul style="list-style-type: none"> - Use a wide range of routine skills and some advanced skills associated with the subject/discipline — for example: - Present using a range of techniques to engage the audience in both familiar and some new contexts - Read and synthesize extended information from subject documents; organize information coherently, convey complex ideas in well-structured form - Use a range of IT applications to support and enhance work - Plan approaches to obtaining and using information, choose appropriate methods and data to justify results & choices - Carry out multi-stage calculations.

Generic Level Descriptors

Level	Knowledge & Intellectual Skills	Processes	Application, Autonomy & Accountability	Communications, IT & Numeracy
5	<ul style="list-style-type: none"> - Generate ideas through the analysis of abstract information and concepts - Command wide ranging, specialized technical, creative and/or conceptual skills - Identify and analyse both routine and abstract professional problems and issues, and formulate evidence-based responses - Analyse, reformat and evaluate a wide range of information - Critically analyse, evaluate and/or synthesize ideas, concepts, information and issues - Draw on a range of sources in making judgments. 	<ul style="list-style-type: none"> - Utilise diagnostic and creative skills in a range of technical, professional or management functions - Exercise appropriate judgement in planning, design, technical and/or supervisory functions related to products, services, operations or processes. 	<ul style="list-style-type: none"> - Perform tasks involving planning, design, and technical skills, and involving some management functions - Accept responsibility and accountability within broad parameters for determining and achieving personal and/or group outcomes - Work under the mentoring of senior qualified practitioners - Deal with ethical issues, seeking guidance of others where appropriate. 	<ul style="list-style-type: none"> - Use a range of routine skills and some advanced and specialized skills in support of established practices in a subject/discipline, for example: - Make formal and informal presentations on standard/mainstream topics in the subject/discipline to a range of audiences - Participate in group discussions about complex subjects; create opportunities for others to contribute - Use a range of IT applications to support and enhance work - Interpret, use and evaluate numerical and graphical data to achieve goals/targets.

Generic Level Descriptors

Level	Knowledge & Intellectual Skills	Processes	Application, Autonomy & Accountability	Communications, IT & Numeracy
6	<ul style="list-style-type: none"> - Critically review, consolidate, and extend a systematic, coherent body of knowledge - Utilise highly specialised technical research or scholastic skills across an area of study - Critically evaluate new information, concepts and evidence from a range of sources and develop creative responses - Critically review, consolidate and extend knowledge, skills practices and thinking in a subject/discipline - Deal with complex issues and make informed judgements in the absence of complete or consistent data/information. 	<ul style="list-style-type: none"> - Transfer and apply diagnostic and creative skills in a range of situations - Exercise appropriate judgement in complex planning, design, technical and/or management functions related to products, services operations or processes, including resourcing and evaluation - Conduct research, and/or advanced technical or professional activity - Design and apply appropriate research methodologies. 	<ul style="list-style-type: none"> - Apply knowledge and skills in a broad range of professional work activities - Practice significant autonomy in determining and achieving personal and/or group outcomes - Accept accountability in related decision making including use of supervision - Demonstrate leadership and /or make an identifiable contribution to change and development. 	<ul style="list-style-type: none"> - Communicate, using appropriate methods, to a range of audiences including peers, senior colleagues, specialists - Use a wide range of software to support and enhance work; identify refinements to existing software to increase effectiveness or specify new software - Undertake critical evaluations of a wide range of numerical and graphical data, and use calculations at various stages of the work.

Generic Level Descriptors

Level	Knowledge & Intellectual Skills	Processes	Application, Autonomy & Accountability	Communications, IT & Numeracy
7	<ul style="list-style-type: none"> - Demonstrate and work with a critical overview of a subject or discipline, including an evaluative understanding of principal theories and concepts, and of its broad relationships with other disciplines - Identify, conceptualise and offer original and creative insights into new, complex and abstract ideas and information - Deal with very complex and/or new issues and make informed judgements in the absence of complete or consistent data/information - Make a significant and original contribution to a specialised field of inquiry, or to broader interdisciplinary relationships. 	<ul style="list-style-type: none"> - Demonstrate command of research and methodological issues and engage in critical dialogue - Develop creative and original responses to problems and issues in the context of new circumstances. 	<ul style="list-style-type: none"> - Apply knowledge and skills in a broad range of complex and professional work activities, including new and unforeseen circumstances - Demonstrate leadership and originality in tackling and solving problems - Accept accountability in related decision making - High degree of autonomy, with full responsibility for own work, and significant responsibility for others - Deal with complex ethical and professional issues. 	<ul style="list-style-type: none"> - Strategically use communication skills, adapting context and purpose to a range of audiences - Communicate at the standard of published academic work and/or critical dialogue - Monitor, review and reflect on own work and skill development, and change and adapt in the light of new demands - Use a range of software and specify software requirements to enhance work, anticipating future requirements - Critically evaluate numerical and graphical data, and employ such data extensively.
