Specification of Competency Standards for the Information & Communications Technology Industry Unit of Competency

Functional Area - Information Security

Range Evaluate the results of application security assessment and propose possible directions for security improvement.	Title	Evaluate the results of application security assessment for improvement recommendation
Level 5 Credit 3 (For Reference Only) Performance Requirements 1. Knowledge of the requirements of application security assessment • understand the basic principles, methodologies and tools in the application security assessment process (e.g. RASP, MAST) • appreciate the objectives of the security assessment • understand the requirements and goals of the security assessment of the organization 2. Evaluate the results of application security assessment • any security weaknesses and vulnerabilities in source code • any security weaknesses in architecture, design, open source and third-party components • consolidate the impacts from possible application security risks in qualitative and quantitative terms • properly document the evaluation results 3. Propose possible directions for improvement • develop a structured plan to coordinate security improvements in according to the organization's guidelines and requirements • propose best practices for security assessment • develop training programmes for internal staff to upgrade their competency The integrated outcome requirements of this UoC are the abilities to: • critically evaluate the results of application security assessment • propose possible directions for security improvement in according to the organization's guidelines and requirements	Code	111173L5
Credit 3 (For Reference Only) Performance Requirements 1. Knowledge of the requirements of application security assessment • understand the basic principles, methodologies and tools in the application security assessment process (e.g. RASP, MAST) • appreciate the objectives of the security assessment • understand the requirements and goals of the security assessment of the organization 2. Evaluate the results of application security assessment • any security weaknesses and vulnerabilities in source code • any security weaknesses in architecture, design, open source and third-party components • consolidate the impacts from possible application security risks in qualitative and quantitative terms • properly document the evaluation results 3. Propose possible directions for improvement • develop a structured plan to coordinate security improvements in according to the organization's guidelines and requirements • propose best practices for security assessment • devel training programmes for internal staff to upgrade their competency The integrated outcome requirements of this UoC are the abilities to: • critically evaluate the results of application security assessment • propose possible directions for security improvement in according to the organization's guidelines and requirements	Range

assessment process (e.g. RASP, MAST) appreciate the objectives of the security assessment understand the requirements and goals of the security assessment of the organization 2. Evaluate the results of application security assessment any security weaknesses and vulnerabilities in source code any security weaknesses in architecture, design, open source and third-party components consolidate the impacts from possible application security risks in qualitative and quantitative terms properly document the evaluation results 3. Propose possible directions for improvement develop a structured plan to coordinate security improvements in according to the organization's guidelines and requirements propose best practices for security assessment develp training programmes for internal staff to upgrade their competency Assessment Criteria The integrated outcome requirements of this UoC are the abilities to: critically evaluate the results of application security assessment propose possible directions for security improvement in according to the organization's guidelines and requirements	Competency	Knowledge of the requirements of application security assessment
any security weaknesses and vulnerabilities in source code any security weaknesses in architecture, design, open source and third-party components consolidate the impacts from possible application security risks in qualitative and quantitative terms properly document the evaluation results 3. Propose possible directions for improvement develop a structured plan to coordinate security improvements in according to the organization's guidelines and requirements propose best practices for security assessment devel training programmes for internal staff to upgrade their competency The integrated outcome requirements of this UoC are the abilities to: critically evaluate the results of application security assessment propose possible directions for security improvement in according to the organization's guidelines and requirements		assessment process (e.g. RASP, MAST)appreciate the objectives of the security assessment
any security weaknesses in architecture, design, open source and third-party components consolidate the impacts from possible application security risks in qualitative and quantitative terms properly document the evaluation results 3. Propose possible directions for improvement develop a structured plan to coordinate security improvements in according to the organization's guidelines and requirements propose best practices for security assessment develp training programmes for internal staff to upgrade their competency Assessment Criteria The integrated outcome requirements of this UoC are the abilities to: critically evaluate the results of application security assessment propose possible directions for security improvement in according to the organization's guidelines and requirements		2. Evaluate the results of application security assessment
develop a structured plan to coordinate security improvements in according to the organization's guidelines and requirements propose best practices for security assessment develp training programmes for internal staff to upgrade their competency Assessment Criteria The integrated outcome requirements of this UoC are the abilities to: critically evaluate the results of application security assessment propose possible directions for security improvement in according to the organization's guidelines and requirements		 any security weaknesses in architecture, design, open source and third-party components consolidate the impacts from possible application security risks in qualitative and quantitative terms
organization's guidelines and requirements		3. Propose possible directions for improvement
critically evaluate the results of application security assessment propose possible directions for security improvement in according to the organization's guidelines and requirements		organization's guidelines and requirements • propose best practices for security assessment
 critically evaluate the results of application security assessment propose possible directions for security improvement in according to the organization's guidelines and requirements 		The integrated outcome requirements of this UoC are the abilities to :
Remark		 propose possible directions for security improvement in according to the organization's
	Remark
