

Specification of Competency Standards
for the Logistics Industry
Unit of Competency

Functional Area - Planning and Design of Logistics Solutions

Title	Manage technical data and information
Code	LOSAPD603B
Range	This unit of competency is applicable to logistics service providers. Practitioners should be capable of applying the knowledge of data management to manage technical data and information with reference to relevant organisational policy (e.g., system security, and user authority).
Level	6
Credit	6 (For Reference Only)
Competency	<p>Performance Requirements</p> <ol style="list-style-type: none"> 1. Knowledge of data management <ul style="list-style-type: none"> • Know about the principles of data management in logistics operations • Know about the principles of system management in logistics operations • Know about data security and related legal requirement • Understand company policy and procedures 2. Designate detailed technical data and information use, and maintenance responsibilities <ul style="list-style-type: none"> • Designate responsibilities for technical data and information use and maintenance activities to staff with reference to system framework, organisational policy (e.g., system security, and user authority) • Develop operating rules in compliance with systems framework • Allocate resources with reference to strategic plan and organisational policy • Review regularly the resources to ensure their reliability and effectiveness 3. Develop key performance indicators for technical data management activities <ul style="list-style-type: none"> • Develop performance indicators for technical data management activities • Identify and document data management responsibilities of individuals/organisations • Determine acceptable range of variation based on data management system and risk management analysis 4. Develop monitoring methodology <ul style="list-style-type: none"> • Develop monitoring methodology for the technical data management system's rules, standards and procedures • Develop a methodology that includes timeframes, means and form • Submit methodology, performance criteria and ranges of variation to relevant authority for approval 5. Monitor a technical data management system <ul style="list-style-type: none"> • Undertake monitoring activities according to timeframes and frequency • Monitor the use of technical data and information • Record variation from data management system's framework, rules, standards and procedures • Provide reports to relevant authority in the required format and intervals 6. Identify and respond to problems and changes <ul style="list-style-type: none"> • Identify problems and changes in monitoring reports

Specification of Competency Standards
