## Specification of Competency Standards for the Retail Industry Unit of Competency

## Functional Area - Purchasing and Logistics Management

Code         104995L6           Description         This unit of competency (UoC) is applicable to logistic management staff in the retail industry. It covers the abilities to evaluate, organize, consolidate, demonstrate creativity and make judgement in complex environment; and formulate logistics solutions for cross-border business coverage areas (e.g., pearl river delta or other countries) in order to provide a logistics service which is more cost-effective and favourable to the business development of the organization.           Level         6           Credit         6 (For Reference Only)           Competency         Performance Requirements           1. Knowledge of regional/transnational logistics operation         • Understand the operation strategies of the organization for different regions/countries           • Understand the requirements of these regions/countries on logistics, transportation, warehousing, customs and bonded operations         • Understand the calculation of costs using different modes of logistic transport in different regions/countries and the principle of transportation network design in different regions/countries           • Understand the calculation of costs using different modes of logistic transport in different regions/countries, e.g. road, railway, river and aviation network           • Sortically analyze, re-organize and evaluate information on operation and supplies as well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the organization           • Critically analyze, re-organize and evaluate information on peration and supplies as well as sales data in order to formulate regional/t	<b>-</b>	
Description         This unit of competency (UoC) is applicable to logistic management staff in the retail industry. It covers the abilities to evaluate, organize, consolidate, demonstrate creativity and make judgement in complex environment; and formulate logistics solutions for cross-border business development of the organization.           Level         6           Credit         6 (For Reference Only )           Competency         Performance Requirements           1. Knowledge of regional/transnational logistics operation         • Understand the operation strategies of the organization for different regions/countries           • Understand the operation strategies of the organization for different regions/countries         • Understand the operation strategies of the organization for different regions/countries           • Understand the principle of transportation network design in different regions/countries and the principle of transportation network design in different regions/countries and the principle of transportation network         • Materstand the calculation of costs using different modes of logistic transport in different regions/countries.           • Cretitically analyze, re-organize and evaluate information and supplies as well as sales data in order to formulate regional/transnational logistics solutions         • Critically analyze, re-organize and evaluate information and prestion solutions favourable to the business development of the organization           • Critically analyze, re-organize and evaluate information and supplies as well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the organization	Title	Formulate cross-border logistics solutions
covers the abilities to evaluate, organize, consolidate, demonstrate creativity and make judgement in complex environment; and formulate logistics solutions for cross-border business coverage areas (e.g., pearl river delta or other countries) in order to provide a logistics service which is more cost-effective and favourable to the business development of the organization.           Level         6           Credit         6 (For Reference Only )           Competency         Performance Requirements           1. Knowledge of regional/transnational logistics operation           • Understand the operation strategies of the organization for different regions/countries • Understand the requirements of these regions/countries on logistics, transportation, warehousing, customs and bonded operations           • Understand the ofosts using different moteox design in different regions/countries and the principle of integration in multimodal transport, cargo handling and warehousing • Understand the calculation of costs using different modes fologistic transport in different regions/countries, e.g. road, railway, river and aviation network           • Master the information on the strengths, scope of service, service points, warehouse locations, etc. of different regional/transnational logistics solutions           • Critically analyze, re-organize and evaluate information on operation and supplies as well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the organization           • Eritically analyze, re-organize and evaluate information on operation and supplies as well as sales data in order to formulate regional/transnational logistics solutions favourable to the busi	Code	104995L6
Credit         6 (For Reference Only )           Competency         Performance Requirements 1. Knowledge of regional/transnational logistics operation           •         Understand the operation strategies of the organization for different regions/countries •           •         Understand the operation strategies of the organization for different regions/countries •           •         Understand the requirements of these regions/countries on logistics, transportation, warehousing, customs and bonded operations           •         Understand the requirements of transportation network design in different regions/countries and the principle of integration in multimodal transport, cargo handling and warehousing •           •         Understand the calculation of costs using different medes of logistic transport in different regions/countries, e.g. road, railway, river and aviation network           •         Master the information on the strengths, scope of service, service points, warehouse locations, etc. of different regional/trind-party and fourth-party logistics service providers           2. Formulate regional/transnational logistics solutions favourable to the business development of the organization         •           •         Critically analyze, re-organize and evaluate information on operation and supplies as well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the resources in the organization network and of cooperation from partners, and design cost-effective transport, etc.           •         Compile reports to illustrate the design concept, princip	Description	covers the abilities to evaluate, organize, consolidate, demonstrate creativity and make judgement in complex environment; and formulate logistics solutions for cross-border business coverage areas (e.g., pearl river delta or other countries) in order to provide a logistics service
Competency         Performance Requirements           1. Knowledge of regional/transational logistics operation <ul> <li>Understand the operation strategies of the organization for different regions/countries</li> <li>Understand the requirements of these regions/countries on logistics, transportation, warehousing, customs and bonded operations</li> <li>Understand the principle of transportation network design in different regions/countries and the principle of transportation network design in different regions/countries</li> <li>Understand the calculation of costs using different modes of logistic transport in different regions/countries, e.g. road, railway, river and aviation network</li> <li>Master the information on the strengths, scope of service, perice points, warehouse locations, etc. of different regional/transport on operation and supplies as well as sales data in order to formulate regional/transport on operation and supplies as well as sales data in order to formulate regional/transport for panization</li> <li>Bring about synergy through coordination and integration of the resources in the organization network and o cooperation from partners, and design cost-effective transport modes, delivery network/routings, multimodal arrangements, means of transport, etc.</li> <li>Compile reports to illustrate the design concept, principle and mode of operation of the logistics solutions</li> <li>Establish key performance indicators(KP) to make the logistics solutions measurable, and review the implementation of the solutions</li></ul>	Level	6
1. Knowledge of regional/transnational logistics operation         • Understand the operation strategies of the organization for different regions/countries         • Understand the requirements of these regions/countries on logistics, transportation, warehousing, customs and bonded operations         • Understand the principle of transportation network design in different regions/countries and the principle of integration in multimodal transport, cargo handling and warehousing         • Understand the calculation of costs using different modes of logistic transport in different regions/countries, e.g. road, railway, river and aviation network         • Master the information on the strengths, scope of service, service points, warehouse locations, etc. of different regional/third-party and fourth-party logistics service providers         2. Formulate regional/transnational logistics solutions         • Critically analyze, re-organize and evaluate information on operation and supplies as well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the organization         • Bring about synergy through coordination and integration of the resources in the organization network and of cooperation from partners, and design cost-effective transport, etc.         • Compile reports to illustrate the design concept, principle and mode of operation of the logistics solutions         • Plan the procedures for handling and transferring goods, documents and information         • Ensure the regional/transnational logistics solutions measurable, and review the implementation of the solutions         3. Exhibit professionalism<	Credit	6 (For Reference Only)
<ul> <li>Understand the requirements of these regions/countries on logistics, transportation, warehousing, customs and bonded operations</li> <li>Understand the principle of transportation network design in different regions/countries and the principle of transportation network design in different regions/countries, e.g. road, railway, river and aviation network</li> <li>Master the information on the strengths, scope of service, service points, warehouse locations, etc. of different regional/third-party and fourth-party logistics service providers</li> <li>Formulate regional/transnational logistics solutions</li> <li>Critically analyze, re-organize and evaluate information on operation and supplies as well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the organization</li> <li>Bring about synergy through coordination and integration of the resources in the organization network and of cooperation from partners, and design cost-effective transport, etc.</li> <li>Compile reports to illustrate the design concept, principle and mode of operation of the logistics solutions</li> <li>Plan the procedures for handling and transferring goods, documents and information</li> <li>Establish key performance indicators(KPI) to make the logistics solutions measurable, and review the implementation of the solutions</li> <li>Ensure the regional/transnational logistics solutions formulated comply with the legal requirements on logistic transport, warehousing, customs and bonded operations to the operation policy and business development of the organization to improve business performance;</li> <li>Ensure the implementation of regional/transnational logistics solutions according to the operation policy and business development of the organization to improve business performance;</li> <li>Ensure the implementation of regional/transnational logistics solutions formulated complix with the KP; and</li> <li>Compi</li></ul>	Competency	
well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the organization         Bring about synergy through coordination and integration of the resources in the organization network and of cooperation from partners, and design cost-effective transport modes, delivery network/routings, multimodal arrangements, means of transport, etc.         Compile reports to illustrate the design concept, principle and mode of operation of the logistics solutions         Plan the procedures for handling and transferring goods, documents and information         Establish key performance indicators(KPI) to make the logistics solutions measurable, and review the implementation of the solutions         3. Exhibit professionalism         Ensure the regional/transnational logistics solutions formulated comply with the legal requirements on logistic transport, warehousing, customs and bonded operations         Assessment Criteria         The integrated outcome requirements of this UoC are the abilities to:         Criteria         The integrated outcome requirements of this UoC are the abilities to:         • Formulate cost-effective and feasible regional/transnational logistics solutions according to the operation policy and business development of the organization to improve business performance;         • Ensure the implementation of regional/transnational logistics solutions formulated complies with the KPI; and         • Compile reports to illustrate to the management the content and operation of the logistics solutions.		<ul> <li>Understand the requirements of these regions/countries on logistics, transportation, warehousing, customs and bonded operations</li> <li>Understand the principle of transportation network design in different regions/countries and the principle of integration in multimodal transport, cargo handling and warehousing</li> <li>Understand the calculation of costs using different modes of logistic transport in different regions/countries, e.g. road, railway, river and aviation network</li> <li>Master the information on the strengths, scope of service, service points, warehouse locations, etc. of different regional/third-party and fourth-party logistics service providers</li> </ul>
requirements on logistic transport, warehousing, customs and bonded operations         Assessment Criteria       The integrated outcome requirements of this UoC are the abilities to:         • Formulate cost-effective and feasible regional/transnational logistics solutions according to the operation policy and business development of the organization to improve business performance;         • Ensure the implementation of regional/transnational logistics solutions formulated complies with the KPI; and         • Compile reports to illustrate to the management the content and operation of the logistics solutions.		<ul> <li>well as sales data in order to formulate regional/transnational logistics solutions favourable to the business development of the organization</li> <li>Bring about synergy through coordination and integration of the resources in the organization network and of cooperation from partners, and design cost-effective transport modes, delivery network/routings, multimodal arrangements, means of transport, etc.</li> <li>Compile reports to illustrate the design concept, principle and mode of operation of the logistics solutions</li> <li>Plan the procedures for handling and transferring goods, documents and information</li> <li>Establish key performance indicators(KPI) to make the logistics solutions measurable, and review the implementation of the solutions</li> </ul>
<ul> <li>Criteria</li> <li>Formulate cost-effective and feasible regional/transnational logistics solutions according to the operation policy and business development of the organization to improve business performance;</li> <li>Ensure the implementation of regional/transnational logistics solutions formulated complies with the KPI; and</li> <li>Compile reports to illustrate to the management the content and operation of the logistics solutions.</li> </ul>
